Notes to financial statements

(in PLN thousand)

The accompanying notes to the financial statements constitute an integral part of the condensed unconsolidated interim financial statements.

1. General information

Bank Polska Kasa Opieki Spółka Akcyjna (hereafter 'Bank Pekao S.A.' or 'the Bank'), with its headhalfs in Warsaw 00-950, Grzybowska Street 53/57, was incorporated on 29 October 1929 in the Commercial Register of the District Court in Warsaw and has been continuously operating since its incorporation.

Bank Pekao S.A. is registered in the National Court Registry – Enterprise Registry of the Warsaw District Court XII Commercial Division of the National Court Registry in Warsaw under the reference number KRS 0000014843.

According to IFRS 10 'unconsolidated financial statements', the parent entity of Bank Pekao S.A. is Powszechny Zakład Ubezpieczeń S.A. (hereinafter 'PZU S.A.') with its registered office in Warsaw at Al. Jana Pawła II 24.

The condensed unconsolidated interim financial statements of Bank Pekao S.A. for the period from 1 January 2018 to 30 June 2018 contain financial information of all the activities performed by the Bank.

The Bank also prepares Condensed Consolidated Interim Financial Statements of Bank Pekao S.A. Group.

2. Business combinations

In the first half of 2018 there were no business combinations in the Bank.

In 2017 the Bank acquired 51% shares in Pekao Investment Management S.A. and 50% shares in Dom Inwestycyjny Xelion Sp. z o.o. These transactions were described in the 2017 annual consolidated financial statements of the Bank Pekao S.A. for the year ended 31 December 2017 in Note 2.

3. Statement of compliance

The condensed unconsolidated interim financial statements of Bank Pekao S.A. have been prepared in accordance with International Accounting Standard 34 'Interim Financial Reporting' (IAS 34) as adopted by the European Union and other applicable regulations.

These financial statements do not include all information required for annual financial statements, and shall be read in conjunction with the unconsolidated financial statements of Bank Pekao S.A. for the year ended 31 December 2017, including changes caused by the implementation of International Financial Reporting Standard 9 'Financial Instruments' (IFRS 9) as of 1 January 2018 (described in Note 4.9).

The unconsolidated financial statements of Bank Pekao S.A. as at and for the year ended 31 December 2017 are available at the Bank's website, www.pekao.com.pl

In accordance with the Decree of the Ministry of Finance dated 29 March 2018 on current and periodic information provided by issuers of securities and the conditions for recognition as equivalent information required by the law of a non-Member State (Official Journal from 2018, item 757) the Bank is required to publish the financial report for the six months period ended 30 June 2018, i.e. current interim period.

The condensed unconsolidated interim financial statements have been prepared in Polish Zloty, and all amounts are stated in PLN thousand, unless indicated otherwise.

These condensed unconsolidated interim financial statements were authorized for issue by the Management Board on 7 August 2018.

(in PLN thousand)

4. Significant accounting policies

4.1 Basis of preparation of Unconsolidated Financial Statements

General information

Unconsolidated Financial Statements of the Bank for the fist half of 2018 have been prepared based on the following valuation methods:

- at fair value for: derivatives, financial assets and liabilities held for trading, financial assets designated as measured
 at fair value through profit and loss at initial recognition, equity instruments, financial assets classified to business
 model whose objective is achieved by both collecting contractual cash flows and selling financial assets and financial
 assets that do not meet SPPI criteria,
- at amortized cost for financial assets, classified to business model whose objective is to hold financial assets in order to collect contractual cash and meeting SPPI criteria at the same time, for other financial liabilities,
- at historical cost for non-financial assets and liabilities,
- non-current assets (or disposal Banks) classified as held for sale are measured at the lower of the carrying amount or the fair value less costs to sell.

Comparative data in these Unconsolidated Financial Statements of the Bank have been prepared based on the following valuation methods:

- at fair value for: derivatives, financial assets and liabilities held for trading, financial assets recognized initially at fair value through profit or loss and available-for-sale financial assets, except for those for which the fair value cannot be reliably measured,
- at amortized cost for other financial assets, including loans and advances and other financial liabilities,
- at historical cost for non-financial assets and liabilities or financial assets available for sale whose fair value cannot be reliably measured,
- non-current assets (or disposal Banks) classified as held for sale are measured at the lower of the carrying amount
 or the fair value less costs to sell.

The Bank has adopted International Financial Reporting Standard 9 'Financial Instruments' with a date of transition of 1 January 2018. The adoption of IFRS 9 has resulted in changes in the accounting policies for recognition, classification and measurement of financial assets and financial liabilities and impairment of financial assets. The impact of the implementation of IFRS 9 has been presented in the Note 4.9.

The Bank has taken advantage of the exemption allowing it not to restate comparative information for prior periods with respect to classification and measurement (including impairment) changes. Differences in the carrying amounts of financial assets and financial liabilities resulting from the adoption of IFRS 9 generally have been recognized in retained earnings as at 1 January 2018.

The Bank decided to take advantage of the choice which gives IFRS 9 and continues to apply the hedge accounting requirements of IAS 39. This decision will apply to all hedging relationships, for which the Bank applies and will apply hedge accounting in the future.

The following is a summary of the significant accounting policies applicable from 1 January 2018, as well as the accounting policies used to compile the comparative data.

(in PLN thousand)

4.2 Foreign currencies

- Transactions and balances
 - Foreign currency transactions are calculated into the functional currency using the spot exchange rate from the date of the transaction. Gains and losses from foreign currency translation differences resulting from settlements of such transactions and from the statement of financial position valuation of monetary assets and liabilities expressed in foreign currencies are recognized in the income statement.
- Foreign currency translation differences arising from non-monetary items, such as equity instruments classified
 as financial assets measured at fair value through the profit or loss are recognized together with the changes in the fair
 value of that item in the income statement.
- Foreign currency translation differences arising from non-monetary items such as equity instruments classified
 as financial assets measured at fair value through other comprehensive income are recognized in the revaluation
 reserves.

The foreign exchange rate differences from the valuation of foreign entities are accounted for as a separate component of equity.

Goodwill arising on acquisition of the entity operating abroad as well as any adjustments of the balance sheet value of assets and liabilities to fair value arising on the acquisition of the entity are treated as assets and liabilities of a foreign entity i.e. they are expressed in the functional currency of the overseas entity and translated at the closing exchange rate as described above

4.3 Income statement

Interest income and expense - principles applied since 1 January 2018

The Bank recognizes in the income statement all interest income and expense related to financial instruments measured at amortized cost using the effective interest rate method, financial assets measured at fair value through other comprehensive income and financial assets and liabilities measured through profit or loss.

The effective interest rate is the discount rate of estimated future cash inflows and payments made during the expected period until the expiry date of the financial instruments, and in justified cases in a shorter time, to the gross carrying amount of such financial asset or to the amortised cost of financial liability. The calculation of the effective interest rate includes all commissions paid and received by parties to the agreement, transaction costs and all other premiums and discounts, comprising an integral part of the effective interest rate.

Interest income includes interest and commission fees received or due from loans, interbank deposits and securities measured at amortised cost recognized in the calculation of effective interest rate of loans and financial assets measured at fair value through other comprehensive income or through profit or loss and hedging derivatives.

Gross carrying amount of the financial asset is the basis for interest income calculation except for credit-impaired financial assets and purchased or originated credit-impaired financial assets ("POCI assets). At the recognition of impairment of financial assets measured at amortized cost or financial assets measured at fair value through other comprehensive income, the interest income is still recognized in profit or loss but is calculated by applying the effective interest rate to the gross carrying amount less the impairment charges

Interest expense related to liabilities associated with client accounts and debt securities issued are recognized in the profit or loss using the effective interest rate.

(in PLN thousand)

Interest income and expense - principles applied until 31 December 2017

The Bank recognizes in the income statement all interest income and expense related to financial instruments valued at amortized cost using the effective interest rate method, financial assets available for sale and financial assets at fair value through profit or loss.

The effective interest rate is the discount rate of estimated future cash inflows and payments made during the expected period until the expiry of the financial instruments, and in justified cases in a shorter time, to the net carrying amount of such financial assets or liabilities.

The calculation of the effective interest rate includes all commissions paid and received by parties to the agreement, transaction costs and all other premiums and discounts, comprising an integral part of the effective interest rate.

Interest income includes interest and commission fees received or due from credits, interbank deposits and held to maturity securities, recognized in the calculation of effective interest rate, as well as from securities available for sale and measured at fair value through the income statement and hedging derivatives.

At the recognition of impairment of financial instruments measured at amortized cost and of available for sale financial assets, the interest income is accrued based on the carrying amount of the receivable (this is the new, lower value reduced by the impairment charge) using the interest rate used when discounting the future cash flows for impairment calculation.

Interest expense of the reporting period related to interest liabilities associated with client accounts and liabilities from the issue of treasury stock are recognized in the income statement using the effective interest rate.

Fee and commission income and expense

Fee and commission income is generated from financial services provided by the Bank. Fee and commission income and expense is recognized in the profit or loss using the following methods:

- fees and commissions directly attributable to financial asset or liability origination (both income and expense) are recognized in the income statement using the effective interest rate method and are described above,
- fees and commissions relating to the loans and advances without a defined repayment schedule and without a defined
 interest rate schedule e.g. overdraft facilities and credit cards are amortized over the life of the product using the straight
 line method,
- other fees and commissions arising from the Bank's financial services offering (customer account transaction charges, credit card servicing transactions, bonuses from card providers in order to cover the marketing card cost, brokerage activity and canvassing) as well as the trade margins on foreign exchange transactions with the Bank's clients are recognized in the income statement up-front when the corresponding service is provided.

Income and expense from bancassurance

The Bank splits the remuneration for sale of insurance products linked to loans into separate components, i.e. dividing the remuneration into proportion of fair value of financial instrument and fair value of intermediary service to the sum of those values. The fair values of particular components of the remuneration are determined based on market data to a highest degree.

The particular components of the Bank's remuneration for sale of insurance products linked to loans are recognized in the income statement according to the following principles:

- remuneration from financial instrument as part of effective interest rate calculation, included in interest income,
- remuneration for intermediary service upfront at the time when the insurance product in sold, included in fee and commission income.

Additionally the Bank estimates the part of the remuneration which will be refunded in the future (eg. due to early termination of insurance contract, early repayment of loan). The estimate of the provision for future refunds is based on the analysis of historical data and expectations in respect to refunds trend in the future.

(in PLN thousand)

Result on financial assets and liabilities measured at fair value through profit or loss – principles applied since 1 January 2018

Result on financial assets measured at fair value through profit or loss includes:

Foreign exchange result

The foreign exchange gains (losses) are calculated taking into account the positive and negative foreign currency translation differences, whether realized or unrealized from the daily valuation of assets and liabilities denominated in foreign currencies. The revaluation is perform using the average exchange announced by the NBP on the balance sheet date.

The foreign exchange result includes swap points from derivative transactions, entered into by the Bank for the purpose of managing the Bank's liquidity in foreign currencies.

Income from foreign exchange positions includes also foreign currency translation differences from valuation of investments in foreign operations arising on disposal thereof. Until the disposal, foreign currency translation differences from valuation of assets in foreign operations are recognized in 'Other capital and reserves'.

Result on derivatives, loans and advances to customers and securities measured at fair value through profit or loss.
 The income referred to above includes gains and losses realized on a sale or a change in the fair value of the assets mentioned above.

The accrued interest and unwinding of a discount or a premium on loans and advances to customers and debt securities measured at fair value through profit or loss is presented in the net interest income.

Result on financial assets and liabilities held for trading - principles applied until 31 December 2017

Result on financial assets and liabilities held for trading include:

Foreign exchange result

The foreign exchange gains (losses) are calculated taking into account the positive and negative foreign currency translation differences, whether realized or unrealized from the daily valuation of assets and liabilities denominated in foreign currencies. The revaluation is perform using the average exchange announced by the NBP on the balance sheet date.

The foreign exchange result includes swap points from derivative transactions, entered into by the Bank for the purpose of managing the Bank's liquidity in foreign currencies.

Income from foreign exchange positions includes also foreign currency translation differences from valuation of investments in foreign operations arising on disposal thereof. Until the disposal, foreign currency translation differences from valuation of assets in foreign operations are recognized in 'Other capital and reserves'.

Income from derivatives and securities held for trading

The income referred to above includes gains and losses realized on a sale or a change in the fair value of assets and liabilities held for trading.

The accrued interest and unwinding of a discount or a premium on securities held for trading is presented in the net interest income.

Gains (losses) on financial assets/liabilities designated at fair value through profit or loss

This includes gains and losses realized on a sale or a change in the fair value of assets and liabilities, designated at fair value through profit or loss.

The accrued interest and unwinding of a discount or a premium on financial assets/ liabilities designated at fair value through profit or loss are recognized in the interest result.

Other operating income/expense

Other operating income includes mainly amounts received for compensation, revenues from operating leases, recovery of debt collection costs, excess payments, miscellaneous income and releases of provision for legal cases. Other operating expenses include mainly the costs of client claims, compensation paid, sundry expenses and costs of provision for litigations.

(in PLN thousand)

4.4 Valuation of financial assets and liabilities, derivative financial instruments

Financial assets - principles applied since 1 January 2018

Financial assets are classified into the following categories:

- financial assets measured at amortised cost,
- financial assets measured at fair value through other comprehensive income,
- financial assets measured at fair value through profit or loss.

The above mentioned classification is based on the entity's business model for managing the financial assets and the characteristics regarding the contractual cash flows (i.e. whether the contractual payments are solely payments of principal and interest on the principal amount outstanding 'SPPI').

The financial assets could be classified depending on the Bank's business model to the following categories:

- a business model whose objective is to hold financial assets in order to collect contractual cash flows,
- a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets,
- a business model whose object is to held financial assets for trading and other business models.

The business model assessment

The assessment of the business model is made at the initial recognition of the asset (with the exception of the first adoption of IFRS 9 – when implementing the Standard, the Bank classifies the particular Banks of the asset in accordance with the business model applied at the date of the implementation of the IFRS 9 i.e. 1 January 2018, not at the initial recognition of the financial asset.

The business model criteria refers to the way the Bank's managing financial assets in order to generate cash flows.

The Bank evaluates the purpose of the business model, to which the particular financial assets are classified on the level of particular portfolios of the assets – performing the analysis on those portfolio level is a reliable reflection of the Bank's business activities regarding these models and also reflects to information analysis of those activities provided to the Bank's management.

The assessment of the business model is based on the analysis of the following information regarding the portfolio of the financial assets:

- applied policies and business aims for the particular portfolio and its practical implementation. In particular, the
 management's strategy regarding the acquisition of revenues from contractual interest payments, maintaining a specific
 interest rate profile of the portfolio, managing the liquidity gap and obtaining cash flows as a result of the sale of financial
 assets is assessed.
- the manner in which the profitability of the portfolio is assessed and reported to the Bank's Management Board,
- types of risk that affect the profitability and effectiveness of a given business model (and financial assets held under this business model) and the manner of managing the identified types of risk,
- the way in which the managers of business operations are remunerated under a given business model eg whether the remuneration depends on changes in the fair value of financial assets or the value of contractual cash flows obtained,
- frequency, value and moment of sale of financial assets made in prior reporting periods, the reasons for these sales and
 expectations regarding future sales activity. However, information on sales activity is analyzed taking into account the
 overall assessment of the Bank's implementation of the adopted method of managing financial assets and generating
 cash flows.

Financial assets held for trading or managed based on their fair value are measured at fair value through profit or loss, as they are not part of the business model, the purpose of which is to benefit from contractual cash flows from held financial assets or the purpose of which is to benefit from acquiring contractual cash flows and from the sale of financial assets.

(in PLN thousand)

Before making a decision regarding allocating a portfolio of financial assets to a business model which purpose is to obtain contractual cash flows, the Bank reviews and evaluates significant and objective quantitative data influencing the allocation of asset portfolios to the relevant business model, in particular:

- the value of sales of financial assets made within the particular portfolios,
- the frequency of sales of financial assets as part of particular portfolios,
- expectation analysis regarding the value of planned sales of financial assets and their frequency of the particular portfolios, this analysis is carried out on the basis of probable scenarios of the Bank's business activities in the future.

The portfolios of financial assets from which sales are made that do not result from an increase in credit risk meet the assumptions of the business model, which purpose is to obtain contractual cash flows, provided that these sales:

- are at low volume (even with a relatively high frequency of sales) or
- are made rarely as a result of one-off events, which the probability to occur again in the future, according to the Bank's professional judgment is rare (even with a relatively high volume) or
- they occur close to the maturity date of the financial assets being sold, and the revenue obtained from such sales is similar to those which could be obtained from remaining contractual cash flows as if the financial asset was held in the Bank's portfolio to the original maturity date.

The following sales are excluded from the analysis of sales value:

- the sales resulting from an increase in the credit risk of financial assets, regardless of their frequency and volume,
- the sales resulting from one-off events, which the probability to occur again in the future, according to the Bank's professional judgment is rare,
- the sales made close to maturity.

A held to obtain contractual cash flows or sale business model includes a portfolio of financial assets whose purpose is, in particular, managing current liquidity levels, maintaining the assumed profitability profile and / or adjust the duration of the asset and financial liabilities, and a level of sales are higher than for those financial assets classified in a model which purpose is to obtain contractual cash flows.

The business model comprising financial assets held for sale and other includes assets that do not meet the criteria to be classified into the business model, which purpose is to obtain contractual cash flows the business model which purpose is to obtain contractual cash flows or sales and also acquiring cash flows from interest and capital is not the main business target.

Assessment, whether the contractual payments are solely payments of principal and interest on the principal amount outstanding (SPPI criteria)

For the purposes of assessing cash flow characteristics, 'principal' is defined as the fair value of a financial asset at the time of initial recognition. 'Interest' is defined as the time value of money and the credit risk related to the unpaid part of principal and also other risks and costs associated with a standard loan agreement (e.g. liquidity risk or administrative costs) and margin.

When assessing whether the contractual cash flows constitute solely payments of principal and interest, the Bank analyzes contractual cash flows. This analysis includes an assessment whether the contractual terms include any provisions that the contractual payments could be changed or the amount of the contractual payments could be changed in a way that from an economic point of view they will not only represent repayments of principal and interest on the outstanding principal. When making this assessment, the Bank takes into account the occurrence of, among others:

- · conditional events that may change the amount or timing of the payment,
- financial leverage (for example, interest terms include a multiplier greater than 1).
- terms regarding the extension of the contract or prepayment option,
- terms that the Bank's cash flow claim is limited to a specified assets (eg non-recourse assets),
- terms that modify the time value of money e.g. mismatch of the frequency of the revaluation of the reference interest rate to its tenor.

The SPPI test is conducted for each financial asset classified into the business model, which purpose is to obtain contractual cash flows or a business model which purpose is to obtain contractual cash flows or sale, as at the initial recognition date or as at the latest significant annex changing the terms of contractual cash flows.

(in PLN thousand)

The Bank performs an SPPI test at the level of homogeneous Banks of standard products or at the level of a single contract for non-standard products or at the level of ISIN code for debt securities.

In situation when the time value of money is modified for a particular financial asset, the Bank is required to make an additional assessment (i.e. Benchmark Test) to determine whether the contractual cash flows are still solely payments of principal and interest on the principal amount outstanding by determining how different the contractual (undiscounted) cash flows could be from the (undiscounted) cash flows that would arise if the time value of money element was not be modified (the benchmark cash flows). Benchmark Testing is not permitted for situation that some terms modify contractual cash flows, such as the built-in leverage element.

Financial assets measured at amortized cost

Financial assets are measured at amortized cost if at the same time they meet the following two criteria:

- the financial asset is held within a business model whose objective is to hold financial assets in order to collect contractual cash flows and
- the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Financial assets measured at amortized cost include amounts due from the Central Bank, amounts due from other banks, loans and advances to customers, investment debt securities, receivables reverse-repo and buy-sell-back transactions, meeting the criteria described in the previous paragraph.

Upon initial recognition, these assets are measured at fair value increased by transaction costs that are directly attributable to the acquisition or issue of a financial asset.

After initial recognition, these assets are measured at amortized cost using the effective interest rate. The calculation of the effective interest rate includes all commissions paid and received by the parties, transaction costs and other bonuses and discounts constituting an intergrated part of the effective interest rate.

Interest accrued using the effective interest rate is recognized in net interest income.

At the moment of recognizing the impairment, the interest recognized in the income statement is calculated based on the amount reduced by an allowance for expected credit losses (net carrying amount), whereas in the balance sheet accrued interest is calculated on the gross amount of the exposure. The difference is included in the impairment allowance.

Allowances for expected credit losses reduce the gross carrying amount of assets, on the other hand they are recognized in the income statement under 'Net impairment losses on financial assets and off-balance sheet commitments.

Financial assets measured at fair value through other comprehensive income

Financial assets (excluding equity instruments) are measured at fair value through other comprehensive income when they simultaneously meet the following two conditions and have not been designated for measurement at fair value through profit or loss:

- the financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets, and
- the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Financial assets measured at fair value through other comprehensive income include investment debt securities as well as loans and advances to customers that meet the criteria described in the previous paragraph.

Interest accrued using the effective interest rate is recognized in net interest income.

The effects of changes in fair value are recognized in other comprehensive income until the asset is excluded from the statement of financial position, when accumulated profit or loss is recognized in the income statement under 'Result on derecognition of financial assets and liabilities not measured at fair value through profit or loss'.

(in PLN thousand)

An allowance for expected credit losses from financial assets that are measured at fair value through other comprehensive income is recognized in other comprehensive income and does not reduce the carrying amount of the financial asset in the statement of financial position. On the other hand, an expected credit risk allowance is recognized in the income statement under 'Net impairment losses on financial assets and off-balance sheet commitments'.

Purchased or originated credit-impaired financial assets (POCI)

The Bank distinguishes the category of purchased or originated credit-impaired assets. POCI are assets that are credit-impaired on initial recognition. Financial assets that were classified as POCI at initial recognition should be treated as POCI in all subsequent periods until they are derecognition.

POCI assets may arise through:

- by purchasing a contract that meets the definition of POCI (e.g. as a result of a merger with another entity or purchase of a portfolio of assets),
- b) by concluding a contract that is POCI at the time of original granting (e.g. granting a loan to a customer in a bad financial condition).
- by modifying the contract (e.g. under restructuring) qualifying this contract to be derecognised, resulting in a recognition of a new contract meeting the definition of POCI.

Conditions for qualifying a contract to be derecognised are described below.

At initial recognition, POCI assets are recognized in the balance sheet at their fair value, in particular they do not have recognized impairment allowance.

POCI assets do not constitute a separate accounting category of financial assets. They are classified into accounting categories in accordance with the general principles for classification of financial assets. The categories in which POCI assets may exist are a category of financial assets measured at amortized cost and financial assets measured at fair value through other comprehensive income.

Investments in equity instruments

For investments in equity instruments not held for trading, the Bank may irrevocably choose to present changes in their fair value in other comprehensive income. The Bank makes a decision in this respect based on an individual analysis of each investment. In such aa case the amounts presented in other comprehensive income are not subsequently transferred to profit or loss. In case of sale of an equity investment elected to be measured at fair value through other comprehensive income, a result on sale is transferred to the item 'Other reserve capital'.

Equity investments not designated for measurement at fair value through other comprehensive income at the initial recognition are measured at fair value through profit or loss. Changes in the fair value of such investments, as well as the result on sales, are recognized in the income statement under 'Result on financial assets and liabilities measured at fair value through profit or loss'.

Dividends from equity instruments, both measured at fair value through profit or loss and designated for valuation through other comprehensive income, are recognized in the income statement when the Bank's right to receive payment is established.

Financial assets at fair value through profit or loss

In this category, the Bank qualifies derivatives (non-hedging instruments), debt and equity securities, loans and receivables that were acquired or included in this category with the intention of selling in the short term. In addition, this category includes financial assets not held for trading that are compulsorily measured at fair value through profit or loss for which the SPPI test has not been passed.

Moreover, at initial recognition, the Bank may irrevocably designate selected financial assets that meet the amortized cost measurement criteria or at fair value through other comprehensive income for measurement at fair value through profit or loss if it eliminates or significantly reduces the accounting mismatch that would otherwise arise from measuring assets at different methods.

(in PLN thousand)

Standardized purchase and sale transactions of financial assets designated at fair value through profit or loss, designated as held for trading (except for derivatives), held to maturity, and available for sale, are recognized and derecognized by the Bank on the settlement date of such transaction, i.e. as at the date of receipt or delivery of such assets.

Changes in the fair value of assets, which occur during the period from transaction date to transaction settlement date, shall be recognized similarly as in the case of the asset held.

Credits and loans are recognized on the date of cash disbursement to the debtor.

Derivative instruments are recognized or derecognized on transaction dates.

Reclassification of financial assets - principles applied from 1 January 2018

Financial assets are not reclassified in the reporting periods following the initial recognition, except for the reporting period following the change of the business model for managing financial assets by the Bank.

The reclassification of financial assets is applied prospectively from the reclassification date - without restatement of previously recognized gains, losses (including impairment gains or losses) or interest.

The following are not changes in business model:

- a change in intention related to particular financial assets (even in circumstances of significant changes in market conditions),
- the temporary disappearance of a particular market for financial assets,
- a transfer of financial assets between parts of the entity with different business models.

Modifications of financial assets - principles applied from 1 January 2018

If the terms of the financial asset agreement change, the Bank assesses whether the cash flows generated by the modified asset differ significantly from those generated by the asset before modifying the terms of its agreement. If a significant difference is identified, the original financial asset is derecognised, and the modified financial asset is recognized in the books at its fair value.

If the cash flows generated by the modified asset measured at amortized cost are not materially different from the original cash flows, the modification does not result in derecognition of the financial asset. In this case, the Bank recalculates the gross carrying amount of the financial asset.

The assessment whether a given modification of financial assets is significant or insignificant modification depends on the fulfillment of qualitative and quantitative criteria.

The Bank has adopted the following quality criteria to determine significant modifications:

- currency conversion, unless it results from existing contractual provisions or requirements of applicable legal regulations,
- change (replacement) of the debtor, excluding the addition / departure of the joint debtor or taking over the loan in inheritance.
- consolidation of several exposures into one under an annex or settlement / restructuring agreement,
- change in the terms of the contract resulting in a change in the result of the SPPI test.

The occurrence of at least one of these criteria results in a significant modification.

The Bank has adopted the following quantitative criteria to determine significant modifications:

- extension of the loan term by at least one year and at least a doubling of the residual maturity to the original maturity (meeting both conditions jointly) for Stage 1 and Stage 2, or
- increasing the current loan amount / limit by at least 10% for Stage 1 and Stage 2 or increasing the current loan amount / limit for a contract in Stage 3.

(in PLN thousand)

Impairment of financial assets - principles applied from 1 January 2018

A financial asset is credit-impaired when one or more events that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired include observable data about the following events:

- 1) significant financial difficulty of the issuer or the borrower,
- 2) a breach of contract, such as a default or past due event,
- 3) the lender(s) of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concession(s) that the lender(s) would not otherwise consider,
- 4) it is becoming probable that the borrower will enter bankruptcy or other financial reorganization,
- 5) the disappearance of an active market for that financial asset because of financial difficulties, or
- 6) the purchase or origination of a financial asset at a deep discount that reflects the incurred credit losses.

The Bank recognises a loss allowance for expected credit losses on a financial asset that is measured at amortised cost or at fair value through other comprehensive income, a lease receivable, a contract asset or a loan commitment and a financial quarantee contract.

A loss allowance for financial assets that are measured at fair value through other comprehensive income is recognised in other comprehensive income and is not reducing the carrying amount of the financial asset in the statement of financial position.

If, at the reporting date, the credit risk on a financial instrument has not increased significantly since initial recognition, the Bank measures the loss allowance for that financial instrument at an amount equal to 12-month expected credit losses.

At each reporting date, the Bank measures the loss allowance for a financial instrument at an amount equal to the lifetime expected credit losses if the credit risk on that financial instrument has increased significantly since initial recognition.

The Bank recognises in profit or loss, as an impairment gain or loss, the amount of expected credit losses (or reversal) that is required to adjust the loss allowance at the reporting date to the amount that is required to be recognised in accordance with this chapter.

For loan commitments and financial guarantee contracts, the date that the Bank becomes a party to the irrevocable commitment shall be considered to be the date of initial recognition for the purposes of applying the impairment requirements.

At the reporting date, the Bank only recognises the cumulative changes in lifetime expected credit losses since initial recognition as a loss allowance for purchased or originated credit-impaired financial assets. At each reporting date, the Bank recognises in profit or loss the amount of the change in lifetime expected credit losses as an impairment gain or loss. An entity shall recognise favourable changes in lifetime expected credit losses as an impairment gain, even if the lifetime expected credit losses are less than the amount of expected credit losses that were included in the estimated cash flows on initial recognition.

The Bank measures the loss allowance at an amount equal to lifetime expected credit losses for:

- 1) trade receivables or contract assets that result from transactions that are within the scope of IFRS 15,
- 2) lease receivables that result from transactions that are within the scope of IAS 17.

Expected credit losses are not recognized for impairment of equity instruments.

The methodology for calculating expected credit losses is described in detail in 'The description of the model for impairment allowance' in Note 6.1.

(in PLN thousand)

Financial assets – principles applied until 31 December 2017

Financial assets are classified into the following categories:

• Financial assets measured at fair value through profit or loss

This category comprises two sub-categories: financial assets held for trading and financial assets designated at initial recognition as financial assets measured at fair value through profit or loss.

Financial assets held for trading include: debt and equity securities, loans and receivables purchased or classified into this category for the purpose of disposal thereof on a short-term basis. The classification also includes derivative instruments (not used as hedging instruments).

Financial assets classified at the moment of original recognition as financial assets measured at fair value through profit or loss include debt securities acquired by the Bank for the purpose of elimination or considerable reduction of inconsistencies in the valuation between these securities and the derivatives, which are economically hedging the interest rate risk of such securities. Otherwise, such securities would have been classified into the available for sale portfolio, with the effect of valuation recognized in revaluation reserves, and valuation of derivatives economically hedging such securities reported in the income statement.

Held to maturity

These are non-derivative financial assets with fixed or determinable payments and fixed maturity, for which the entity has an intent and ability to hold to maturity, other than:

- a) those that the entity upon initial recognition designates as at fair value through profit or loss,
- b) those that the entity designates as available for sale, and
- c) those that meet the definition of loans and receivables.

Financial assets classified into this category are measured at amortized cost using the effective interest rate method. The recognition of amortized cost with the use of effective interest rate is recognized in interest income.

Loans and receivables

Loans and receivables are non-derivative financial assets, with fixed or determinable payments, not quoted on active markets, other than:

- a) those that the entity intends to sell immediately or in the near term which are classified as held for trading and those that the entity designates as at fair value through profit or loss upon initial recognition,
- b) those that the Bank upon initial recognition designates as available for sale, or
- c) those for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration, which are classified as available for sale.

This category also contains debt securities, purchased from the issuer, for which there is no active market, as well as credits, loans, receivables from reverse repo transactions and other receivables acquired and granted. Loans and receivables are measured at amortized cost using the effective interest rate method and with consideration of impairment.

Available for sale

This includes financial assets with an undefined holding period. The portfolio includes: debt and equity securities, as well as loans and receivables not classified into other categories. Interest on assets available for sale is calculated using the effective interest rate method, and recognized in the income statement.

Available for sale financial assets are measured at fair value, whereas gains and losses resulting from changes in fair value against amortized cost are recognized in the revaluation reserves. Amounts in the revaluation reserves are recognized in the income statement either on the sale of an asset, or its impairment. In case of impairment of an asset, previous increases from revaluation to fair value will decrease the 'Revaluation reserves'. Should the amount of previously recognized increases be insufficient to cover the impairment, the difference will be recorded in the income statement as 'Net impairment losses on financial assets and off-balance sheet commitments'.

(in PLN thousand)

Dividends from equity instruments are recognized in the profit or loss at the moment the rights to receive such payments are established.

Standardized purchase and sale transactions of financial assets designated at fair value through profit or loss, designated as held for trading (except for derivatives), held to maturity, and available for sale, are recognized and derecognized by the Bank on the settlement date of such transaction, i.e. as at the date of receipt or delivery of such assets.

Changes in the fair value of assets, which occur during the period from transaction date to transaction settlement date, shall be recognized similarly as in the case of the asset held.

Credits and loans are recognized on the date of cash disbursement to the debtor.

Derivative instruments are recognized or derecognized on transaction dates.

Reclassification of financial assets - principles applied until 31 December 2017

The Bank may reclassify the financial assets classified as available for sale, which meet the definition of loans and receivables, from the category of available for sale financial assets to the category of loans and receivables, if the Bank has the intent and the ability to hold such financial assets in foreseeable future or until their maturity.

If the financial asset with a given maturity is reclassified, prior gains and losses associated with such asset, recognized in other comprehensive income, are amortized in the profit or loss throughout the remaining period until maturity, using the effective interest rate method. Any differences between such new amortized cost and embedded amount is amortized throughout the period remaining until the maturity of such asset using the effective interest rate method, similar to premium or discount amortization.

The Bank allows the reclassification of financial assets classified as financial assets measured at fair value through profit or loss, if extraordinary circumstances occur, i.e. events that are unusual and highly unlikely to recur in the near term.

Such financial assets are reclassified at fair value as at reclassification date. The gains or losses recognized in the profit or loss before such reclassification cannot be reversed. The fair value of financial assets, as at reclassification date, is recognized as its new cost or its new amortized cost.

Impairment of financial assets - principles applied until 31 December 2017

Assets measured at amortized cost – loans and advances

At each balance sheet date the Bank assesses whether there is any objective evidence ('triggers') that loans and advances or financial assets held-to-maturity measured at amortized cost ('loan exposures') are impaired. In the process of impairment assessment the Bank considers all loan exposures, irrespective of the level of risk of particular loan exposures or a Bank of loan exposures.

The Bank splits the loan exposures into individually significant exposures and individually insignificant exposures. In respect to exposures assessed individually the Bank applies the following list of impairment triggers:

- overdue in repayment of principal, interest or credit fees more than 90 days and more than 2 working days in case of
 exposure towards banks including credit transactions and reverse repo/sell-buy-backs,
- significant financial difficulties of borrower (including loss of job or other events that could impact on ability to repayment
 in case of individuals). Significant financial difficulties of economic entity mean financial standing that could threaten
 timely repayment of liabilities towards the Bank, especially when incurred losses have consumed equity in 50%,
 excluding projects where losses have been assumed or where external financial support exists (in form of injections to
 the equity, granting a loan, warranty/guarantee by related company or other third party, conversion of loan into equity,
 issuance of shares/bonds),
- restructuring, if it is related with granting an advantage, due to economic or legal reasons resulted from financial
 difficulties of the borrower, that in other circumstances the Bank would not give. The advantage leads to reduction of the
 Bank's loan exposure, and may include: reduction of the interest rate, temporary interest accruing holidays, cancelling a
 part or total of the exposures, in this interest or principal,

(in PLN thousand)

- lowering by the well-known and accepted rating agency a borrower's rating or country's rating country of domicile or rating of debt securities issued by the borrower by at least 4 notches including modifiers within one year. Decrease in credit rating alone is not an evidence of impairment trigger but could be confirmation of impairment if it is analyzed together with other available information,
- significant worsening of rating or scoring analysis results. It means the decrease in rating by 4 notches in the scale and
 at the same time move to non-performing category based only on rating criterion, excluding situations of rating
 deterioration resulted from seasonality of activity and excluding impact of classification in RMT ('Risk Management
 Tool') on rating. Decrease in rating alone is not an evidence of impairment trigger but could be confirmation of
 impairment if it is analyzed together with other available information,
- the Bank has started an execution process or has been informed about execution towards borrower,
- the debt/loan is questioned by the borrower including commencement of legal proceedings,
- the debt/loan has been due as the credit agreement has been terminated,
- the motion for borrower's bankruptcy has been filled in the court or legal proceedings has been instituted.
- disappearance of active market for given credit exposure resulted from financial difficulties of debtor. This impairment
 trigger could refer to financial instruments listed on stock exchanges, when due to significant deterioration in financial
 standing of issuer (eventually bankruptcy), the liquidity of assets trading is so low that reliable price fixing is not
 possible.
- receivership has been established or debtor has stopped/suspended its activity,
- unknown place of stay and not disclosed assets of the borrower.

In respect to exposures assessed collectively the Bank applies the following list of impairment triggers:

- overdue in repayment of principal, interest or credit fees greater or equal to 90 days,
- significant financial difficulties of debtor, including loss of job or other events that could impact on ability to repayment,
- unknown place of stay and not disclosed assets of the retail debtor or sole trader.

The Bank classifies the exposure as past due in case the borrower has failed to make payment on the principal and/or interest in the contractual maturity date. The Bank presents the whole amount of exposure as past due, regardless of whether the delay of payment affects the whole exposure, or only part of it (installment).

The number of days past due for receivables paid by installments is assumed as the period from the date of maturity of the earliest installment, when the repayment is delayed.

In case of identification of impairment triggers for at least one of loan exposures of the borrower, all loan exposures of such borrower are assessed for impairment.

For all loans exposures, which are impaired, the Bank measures the amount of impairment allowance as the difference between the loan exposure's carrying amount and the present value of estimated future cash flows, discounted at the loan exposure's original effective interest rate. The carrying amount of the loan exposure is reduced through use of an allowance account. The amount of the impairment loss is recognized in profit or loss. If, in a subsequent period, the amount of impairment loss decreases, then the previously recognized impairment loss is reversed by adjusting an allowance account. The amount of the reversal is recognized in profit or loss.

For all individually significant exposures, which are impaired as at balance sheet date, the Bank measures the impairment allowance (impairment loss) as part of individual assessment. The individual assessment is carrying out by the Bank's employees and consists of individual verification of the impairment occurrence and projection of future cash flows from foreclosure less costs for obtaining and selling the collateral or other resources. The Bank compares the estimated future cash flows applied for measurement of individual impairment allowances with the actual cash flows on a regular basis.

For all individually insignificant exposures, which are impaired as at balance sheet date, the Bank measures the impairment allowance (impairment loss) as part of collective assessment. Each exposure assessed collectively is Banked based on similar credit risk characteristics on the basis of the borrower's type, the product's type, past-due status or other relevant factors impacting on the debtor's ability to pay all amounts due according to the contractual terms. The future cash flows are estimated on the basis of historical data of cash flows and historical loss experience for exposures with credit risk characteristics similar to those in the Bank (for example, the value of the real estate taken as the collateral for the mortgage).

(in PLN thousand)

Historical data, when necessary, are adjusted on the basis of current data to remove the effects of conditions in the historical period that do not exist currently. The recovery rates ('RR') and the methodology and assumptions used for estimating future cash flows for particular Banks of loan exposures are reviewed regularly.

For all loan exposures, for which no impairment triggers have been identified, the Bank measures the allowance for losses incurred, but not reported ('IBNR'). As part of IBNR assessment the Bank estimates the loss resulting from events not reported as at balance sheet date and for which no impairment triggers have been identified, but the events occurred prior to balance sheet date and the loss was incurred. While estimating the IBNR, it is assumed that there is a several-months period from the date of emergence of objective impairment trigger to the date of its reporting, i.e. loss identification period ('LIP'). The value of LIP parameter is estimated on the basis of statistical analysis using the historical data. The Bank applies different loss identification periods for different Banks of loan exposures, taking into account the client's segment, the product's type and the collateral. The update of LIP parameter is carrying out at least once a year.

The IBNR is measured based on the likelihood that the debtor will be unable to meet its obligations during loss identification period ('PD_LIP') multiplied by impairment loss estimated analogously like collective allowance for value of exposure at default ('EAD'). The value of EAD parameter is estimated on the basis of historical data.

The Bank estimates the value of PD_LIP parameter using the PD measured by Basel models with relevant transformation taking into account the shortening of loss identification period for applied length of LIP and Point-in-Time adjustment. Within the transformation the Bank calibrates the values of PD parameter to the most up to date realized PD_LIP values once a month. The values of PD_LIP as estimated reflect the current economic conditions the best. The model applied to measurement of PD_LIP is of 'Point-In-Time' type.

The values of LIP, PD_LIP, EAD and RR applied for IBNR measurement as well as the methodology and assumptions used for estimating such parameters for particular Banks of loan exposures are reviewed regularly.

Financial assets available for sale

When a decline in the fair value of an available for sale financial asset has been recognized directly in equity and there is objective evidence that the asset is impaired, the cumulative loss that has been recognized directly in equity is removed from equity and recognized in the income statement. The amount of the cumulative loss transferred to the income statement is the difference between the acquisition cost (net of any principal repayment and amortization) and the current fair value. If, in a subsequent period, the fair value of a debt instrument classified as available for sale increases and the increase can be objectively related to an event occurring after the impairment loss was recognized in profit or loss, the impairment loss is reversed, with the amount of the reversal recognized in the income statement.

If there is objective evidence that an impairment loss has been incurred on an unquoted equity instrument that is not carried at fair value because its fair value cannot be reliably measured, the amount of the impairment loss is measured as the difference between the carrying amount of the financial asset and the present value of estimated future cash flows discounted at the current market rate of return for a similar financial asset.

Off-balance sheet commitments

The provisions for off-balance sheet commitments is measured as the difference between the expected value of balance sheet exposure arising from granted off-balance sheet commitment and the present value of estimated future cash flows from that balance sheet exposure at the date of impairment identification. The expected value of balance sheet exposure arising from granted off-balance sheet commitment is measured using the credit conversion factor ('CCF'), estimated on the basis of historical data.

The values of CCF applied for measurement of provisions for off-balance sheet commitments as well as the methodology and assumptions used for estimating such parameters for particular Banks of loan exposures are reviewed regularly.

The Bank estimates the future cash flows as part of individual assessment or collective assessment depending on classification of particular off-balance sheet commitments as individually significant exposures or individually insignificant exposures.

(in PLN thousand)

Derivative financial instruments and hedge accounting

The Bank acquires the derivative financial instruments: currency transactions (spot, forward, currency swap and currency options, CIRS), exchange rate transactions (FRA, IRS, CAP), derivative transactions based on security prices, indices of stocks and commodities. Derivative financial instruments are initially recorded at fair value as at the transaction date and subsequently re-measured at fair value at each balance sheet date. The fair value is established on the basis of market quotations for an instrument traded in an active market, as well as on the basis of valuation techniques, including models using discounted cash flows and options valuation models, depending on which valuation method is appropriate.

Positive valuation of derivative financial instruments is presented in the statement of financial position in the line 'Derivative financial instruments (held for trading)' or 'Hedging instruments' on an asset side, whereas the negative valuation - 'Derivative financial instruments (held for trading)' or 'Hedging instruments' on a liabilities side. For financial instruments with an embedded derivative component, if the whole or part of the cash flows related to such a financial instrument changes in a way similar to what would be the case with the embedded derivative instrument on its own, then the embedded derivative instrument is reported separately from the basic contract.

This occurs under the following conditions:

- the financial instrument is not included in assets held for trading or in assets designated at fair value through the profit or loss the revaluation results of which are reflected in the financial income or expense of the reporting period,
- the nature of the embedded instrument and the related risks are not closely tied to the nature of the basic contract and to the risks resulting from it,
- a separate instrument characteristics of which correspond to the features of the embedded derivative instrument would meet the definition of the derivative instrument,
- it is possible to reliably establish the fair value of the embedded derivative instrument.

In case of contracts that are not financial instruments with a component of an instrument meeting the above conditions the built-in derivative instrument is classified in accordance with assets or liabilities of derivatives financial instruments with respect to the income statement in accordance with derivative financial instruments valuation principles.

The method of recognition of the changes in the fair value of an instrument depends on whether a derivative instrument is classified as held for trading or is designated as a hedging item under hedge accounting.

The changes in fair value of the derivative financial instruments held for trading are recognized in the income statement.

The Bank designates some of its derivative instruments as hedging items in applying hedge accounting. The Bank decided to take advantage of the choice which gives IFRS 9 and continues to apply the hedge accounting requirements of IAS 39. This decision will apply to all hedging relationships, for which the Bank applies and will apply hedge accounting in the future. The Bank implemented fair value hedge accounting as well as cash flow hedge accounting.

Fair value hedge accounting principles

Changes in the measurement to fair value of financial instruments indicated as hedged positions are recognized - in the part ensuing from hedged risk - in the income statement. In the remaining part, changes in the carrying amount are recognized in accordance with the principles applicable for the given class of financial instruments.

Changes in the fair market valuation of derivative financial instruments, indicated as hedging positions in fair value hedge accounting, are recognized in the profit or loss in the same caption, in which the gains/losses from change in the value of hedged positions are recognized.

Interest income on derivative instruments hedging interest positions hedged is presented as interest margin.

The Bank ceases to apply hedge accounting, when the hedging instrument expires, is sold, dissolved or released (the replacement of one hedging instrument with another or extension of validity of given hedging instrument is not considered an expiration or release, providing such replacement or extension of validity is a part of a documented hedging strategy adopted by given unit), or does not meet the criteria of hedge accounting or the Bank ceases the hedging relation.

An adjustment for the hedged risk on hedged interest position is amortized in the income statement at the point of ceasing to apply hedge accounting.

(in PLN thousand)

Cash flow hedge accounting principles

Changes in the fair value of the derivative financial instruments indicated as cash flow hedging instruments are recognized:

- directly in the caption 'Revaluation reserves' in the part constituting the effective hedge,
- in the income statement in the line 'Result on financial assets and liabilities held for trading' in the part representing ineffective hedge.

The amounts accumulated in the 'Revaluation reserves' are transferred to the income statement in the period, in which the hedge is reflected in the income statement and are presented in the same lines as individual components of the hedged position measurement, i.e. the interest income from hedging derivatives in cash flow hedge accounting is recognized in the interest result, whereas gains/losses from foreign exchange revaluation are presented in the foreign exchange gains (losses).

The Bank ceases to apply hedge accounting when the hedging instrument expires or is sold, or if the Bank revokes the designation. In such cases, the accumulated gains or losses related to such hedging item, initially recognized in 'Revaluation reserves', if the hedge was effective, are still presented in equity until the planned transaction was closed and recognized in the income statement.

If the planned transaction is no longer probable, the cumulative gains or losses recognized in 'Revaluation reserves' are transferred to the income statement for the given period.

Financial liabilities

The Bank classifies financial liabilities other than financial guarantee contracts and loan commitments, as measured at amortized cost or at fair value through profit or loss.

Financial liabilities valued at amortized cost include liabilities to banks and customers, loans taken by the Bank and issued own debt securities.

Subordinated liabilities

Subordinated liabilities are measured at amortized cost using the effective interest rate method.

De-recognition of financial instruments from the statement of financial position

Financial assets are derecognized when the contractual rights to the cash flows from the financial assets expire or when the Bank transfers the contractual rights to receive the cash flows in a transaction in which substantially all risk and rewards of ownership of the financial asset are transferred.

The Bank derecognizes a credit or a loan receivable, or its part, when it is sold. Additionally, the Bank writes-off a receivable against the corresponding impairment provision (completely or partially) when the debt redemption process is completed and when no further cash flows from the given receivable are expected. Such cases are documented in compliance with the current tax regulations.

Accumulated profits and losses that have been recognized in other comprehensive income from equity instruments designated to be measured at fair value through other comprehensive income are not recognized in the profit and loss account when these financial instruments are removed from the balance sheet.

The Bank derecognizes a financial liability, or its part, when the liability expires. The liability expires when the obligation stated in the agreement is settled, redeemed or the period for its collection expires.

Repo and reverse-repo agreements

Repo and reverse-repo transactions, as well as sell-buy back and buy-sell back transactions are classified as sales or purchase transactions of securities with the obligation of repurchase or resale at an agreed date and price.

Sales transactions of securities with the repurchase obligation granted (repo and sell-buy back) are recognized as at transaction date in amounts due to other banks or amounts due to customers from deposits depending upon the counterparty to the transaction. Securities purchased in reverse-repo and buy-sell back transactions are recognized as loans and receivables from banks or as loans and receivables from customers, depending upon the counterparty to the transaction.

The difference between the sale and repurchase price is recognized as interest income or expense, and amortized over the contractual life of the contract using the effective interest rate method.

(in PLN thousand)

4.5 Valuation of other items in the Bank's unconsolidated statement of financial position

Intangible assets

Goodwill

Goodwill is defined as a surplus of the purchasing price over the fair value of the assets, liabilities and contingent liabilities of the acquired subsidiary, associate or a unit under joint control. Goodwill at initial recognition is carried at purchase price reduced by any accumulated impairment losses. Impairment is determined by estimating the recoverable value of the cash generating unit, to which given goodwill pertains.

If the recoverable value of the cash generating unit is lower than the carrying amount an impairment charge is made. Impairment identified in the course of such tests is not subject to subsequent adjustments.

Goodwill on acquisition of subsidiaries is presented in intangible assets and goodwill on acquisition of associates is presented under the caption 'Investments in associates'.

Other intangible assets

Intangible assets are assets controlled by the Bank which do not have a physical form which are identifiable and represent future economic benefits for the Bank directly attributable to such assets.

These assets include:

- computer software licenses,
- copyrights,
- costs of completed development works.

Intangible assets are initially carried at purchase price. Subsequently intangible assets are stated at cost less accumulated amortization and accumulated impairment losses.

Intangible assets with a definite useful life are amortized over their estimated useful life. Intangible assets with indefinite useful life are not amortized.

All intangible assets are reviewed on a periodical basis to verify if any significant impairment triggers occurred, which would require performing a test for impairment and a potential impairment charge.

As far as intangible assets with indefinite useful life and those still not put into service are concerned, impairment test is performed on a yearly basis and additionally when impairment triggers are identified.

Property, plant and equipment

Property, plant and equipment are defined as controlled non-current assets and assets under construction. Non-current assets include certain tangible assets with an expected useful life longer than one year, which are maintained for the purpose of own use or to be leased to other entities.

Property, plant and equipment are recognized at historical cost less accumulated depreciation and accumulated impairment write downs. Historical cost consists of purchase price or development cost and costs directly related to the purchase of a given asset.

Each component of property, plant and equipment, the purchase price or production cost of which is significant compared to the purchase price or production cost of the entire item is a subject to separate depreciation. The Bank separates the initial value of property, plant and equipment into its significant parts.

Subsequent expenditures relating to property plant and equipment are capitalized only when it is probable that such expenditures will result in future economic benefits to the Bank, and the cost of such expenses can be reliably measured.

Service and maintenance costs of property, plant and equipment are expensed in the reporting period in which they have been incurred.

Borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset form part of the cost of that asset. Other borrowing costs are recognized as an expense.

(in PLN thousand)

Depreciation and amortization

Depreciation expense for property, plant and equipment and investment properties and the amortization expense for intangible assets are calculated using straight line method over the expected useful life of an asset. Depreciated value is defined as the purchase price or cost to develop a given asset, less residual value of the asset. Depreciation rates and residual values of assets, determined for balance-sheet purposes, are subject to regular reviews, with results of such reviews recognized in the same period.

The statement of financial position depreciation and amortization rates applied to property, plant and equipment, investment properties and intangible assets are as follows:

a) depreciation rates applied for non-current assets

Buildings and structures and cooperative ownership rights to residential premises and cooperative ownership rights to commercial premises	1.5% – 10.0%
Technical equipment and machines	4.5% - 30.0%
Vehicles	7% – 20.0%

b) amortization rates for intangible assets

Software licenses, copyrights	12.5% – 50.0%
Costs of completed development projects	33.3%
Other intangibles	20% - 33.3%

c) depreciation rates for investment properties

Buildings and structures	1.5% – 10.0%
--------------------------	--------------

Land, non-current assets under construction and intangible assets under development are not subject to depreciation and amortization.

Depreciation and impairment deductions are charged to the income statement in the item 'Depreciation and amortization'.

Investment properties

Investment properties assets are recognized initially at purchase cost, taking the transaction costs into consideration. Upon initial recognition, investment property assets are measured using the purchasing price model.

Investment property assets are derecognized from the statement of financial position when disposed of, or when such investment property is permanently decommissioned and no future benefits are expected from its sale. Any gains or losses resulting from de-recognition of an investment property are recognized in the income statement in the period when such derecognition occurred.

Non-current assets held for sale and discontinued operations

Non-current assets held for sale include assets, the carrying amount of which is to be recovered by way of resale and not from their continued use. The only assets classified as held for sale are those available for immediate sale in their present condition, and the sale of which is highly probable, i.e. when the decision has been made to sell a given asset, an active program to identify a buyer has been launched and the divestment plan is completed. Moreover, such assets are offered for sale at a price which approximates its present fair value, and it is expected that the sale will be recognized as completed within one year from the date of such asset is reclassified into this category.

Non-current assets held for sale are recognized at the carrying amount or at fair value reduced by the cost of such assets, whichever is lower. Assets classified in this category are not subject to depreciation.

A discontinued operation is a component of the Bank's business which constitutes a separate line of business or a geographical area of operations, which was sold, made available for sale or to be disposed, or is a subsidiary acquired exclusively with a view to re-sale. Classification as a discontinued operation occurs on disposal or when the operation meets the criteria to be classified as held for sale. When an operation is classified as held for sale, the comparative figures in the income statement are represented as if the operation had been discontinued from the beginning of the comparative period.

(in PLN thousand)

Leases

The Bank is a party to leasing contracts on the basis of which it grants a right to use a non-current asset or an intangible asset for an agreed period of time in return for payment.

The Bank is also a party to leasing contracts under which it receives a right to use a non-asset or an intangible asset for an agreed period of time from another party in return for a payment.

Operating leases

In the case of leasing contracts entered into by the Bank acting as lessor, the leased asset is presented in the Bank's statement of financial position, since there is no transfer to the lessee of essentially all risks and benefits resulting from the asset.

In the case of lease agreements, entered into by the Bank as lessee, the leased asset is not recognized in the Bank's statement of financial position.

The entire amount of charges from operating leases is recognized in the profit or loss on a straight line basis, throughout the leasing period.

Finance leases

In the lease agreements, where essentially all risks and benefits relating to the ownership of an asset are transferred, the leased asset is no longer recognized in the statement of financial position of the Bank. However, receivables are recognized in the amount equal to the present value of the minimum lease payments. Lease payments are split into the financial income and the reduction of receivables balance in order to maintain a fixed interest rate on the outstanding liability. Finance lease costs are recognized directly in the income statement in the position 'Interest expense'.

Non-current assets subject to finance lease agreements are depreciated in the same way as other non-current assets. However, if it is uncertain whether the ownership of the asset subject of the contract will be transferred then the asset is depreciated over the shorter of the expected useful life or the initial period of lease.

Provisions

The provisions are recognized when the Bank has a present obligation (legal or constructive) resulting from the past events, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation.

If the effect of the time value of money is material, the amount of a provision is established by discounting forecasted future cash flows to the present value, using the discount rate reflecting current market estimates of the time value of money and the possible risk associated with the obligation.

The provisions include the provisions relating to long-term employee benefits, in this those measured by an actuary and provisions for restructuring costs. The provision for restructuring costs is recognized when the general recognition criteria for provisions and detailed criteria for recognition of provisions for restructuring cost under IAS 37 'Provisions, contingent liabilities and contingent assets' are met. The amount of employment restructuring provision is calculated by the Bank on the basis of the best available estimates of direct outlays resulting from restructuring activities, which are not connected with the Bank's current activities.

The provisions are charged to the income statement, except for actuarial gains and losses from the measurement of the defined benefit plans obligations, which are recognized in other comprehensive income.

Deferred income and accrued expenses (liabilities)

This caption includes primarily commission income settled using the straight line method and other income charged in advance, that will be recognized in the income statement in the future periods.

Accrued expenses include accrued costs resulting from services provided for the Bank by counterparties which will be settled in future periods, accrued payroll and other employee benefits (including annual and Christmas bonuses, other bonuses and awards and accrued holiday pay).

Deferred income and accrued expenses are presented in the statement of financial position under the caption 'Other liabilities'.

(in PLN thousand)

Government grants

The Bank recognizes government grants when there is reasonable assurance that it will comply with any conditions attached to the grant and the grant will be received. Government grants are recognized in profit or loss in the periods in which the related expenses are recognized which the grants are intended to compensate. For the settlement of the grant, the Bank uses the income method. Government grants related to assets are presented in the statement of financial position of the Bank as a reduction in the carrying value of the asset.

Equity of the Bank

Equity is comprised of the capital and funds created by the companies of the Bank in accordance with the binding legal regulations and the appropriate laws and Articles of Association. Equity also includes retained earnings. Subsidiaries' equity line items, other that share capital, are added to the relevant equity line items of the parent company, in the proportion of the Bank's interest.

The equity of the Bank includes only those parts of the subsidiaries' equity which were created after the date of purchase of shares or stocks by the parent entity.

The Bank equity consists of the following:

- a) share capital applies only to the capital of the Bank as the parent entity and is presented at nominal value specified in the Articles of Association and in the entry in the Enterprises Registry,
- b) 'issue premium' surplus generated during share issues over the nominal value of such issues, remaining after the issue costs are covered. Moreover, this item also includes a change in the value of minority shares, ensuing from an increase of the share of the Parent entity in Bank's share capital,
- c) the general banking risk fund is established at Bank Pekao S.A. in keeping with the Banking Act dated 29 August 1997 from profit after tax.
- d) other reserve capital utilized for the purposes defined in the Statute is created from appropriations of profits,
- e) revaluation reserve includes the impact of revaluation of debt financial instruments measured at fair value through other comprehensive income, revaluation or sale of investments in equity instruments designated at fair value through other comprehensive income, revaluation of derivative instruments hedging cash flows, remeasurements of the defined benefit liabilities and the value of deferred tax for items classified as temporary differences, recognized as valuation allowance. In the statement of financial position, the valuation allowance is presented as net value,
- f) other capital:
 - other supplementary capital, established in keeping with provisions under the Articles of Association of the Bank from profit appropriations,
 - bonds convertible to shares includes the fair value of financial instruments issued as part of transactions settled in equity instruments,
 - brokerage activity fund for stock broking operations, carried out by Bank Pekao S.A.,
 - retained earnings from prior periods includes undistributed profit and uncovered losses generated/incurred in prior periods by the Bank Pekao S.A.,
 - net profit/loss which constitutes profit/loss presented in the income statement for the relevant period. Net profit is after accounting for income tax.

(in PLN thousand)

Bank's Pekao S.A. phantom shares-settled share-based payment transaction

The cost of transactions settled with employees in phantom shares is measured by reference to the fair value of the liability as of the balance sheet date.

The fair value of the liability is estimated based upon the Bank's shares price on the (WSE) as of the balance sheet date and expected number of phantom shares to which full rights will be acquired.

The cost of phantom share-based payments is recognized in personnel expenses together with the accompanying increase in the value of liabilities towards employees presented in 'Provisions'.

The accumulated cost recognized for transactions settled in phantom shares for each balance sheet date until the vesting date reflects the extent of elapse of the vesting period and the number of rights to shares the rights to which – in the opinion of the Bank's Management Board for that date based on best available estimates of the number of phantom shares – will be eventually vested.

4.6 Income tax

Income tax expense comprises current and deferred tax. The income tax expense is recognized in the income statement excluding the situations when it is recognized directly in equity. The current tax is the tax payable of the Bank entities on their taxable income for the period, calculated based on binding tax rates, and any adjustment to tax payable in respect of previous years. The receivables resulting from taxes are disclosed if the Bank's companies has sufficient certainty that they exist and that they will be recovered.

Deferred tax assets and deferred tax liabilities are calculated, using the balance sheet method, on temporary differences between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes. Deferred income tax is determined using tax rates based on legislation enacted or substantively enacted at the balance sheet date and expected to apply when the deferred tax asset or the deferred tax liability is realized.

A deferred tax asset is recognized for negative temporary differences to the extent that it is probable that taxable profit will be available against which the deductible temporary difference can be utilized.

A deferred tax liability is calculated using the balance sheet method based on identification of positive temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for tax purposes.

4.7 Other

Contingent liabilities and commitments

The Bank enters into transactions which are not recognized in the statement of financial position as assets or liabilities, but which result in contingent liabilities and commitments. Contingent liabilities are characterized as:

- a potential obligation the existence of which will be confirmed upon occurrence or non-occurrence of uncertain future events that are beyond the control of the Bank (e.g. litigations),
- a current obligation which arises as a result of past events but is not recognized in the statement of financial position as it is improbable that it will result in an outflow of benefits to settle the obligation or the amount of the obligation cannot be reliably measured (mainly: unused credit lines and guarantees and letters of credit issued).

Financial guarantees

Financial guarantees are measured at the higher of:

- the amount of the loss allowance, or
- the amount initially recognised less the cumulative amount of income recognised in accordance with the principles of IFRS 15.

(in PLN thousand)

4.8 New standards, interpretations and amendments to published standards that have been approved and published by the European Union and are effective on or after 1 January 2018

IFRS 9 'Financial Instruments' and other changes

The Bank has adopted International Financial Reporting Standard 9 'Financial Instruments' with a date of transition of 1 January 2018.

Set out below are disclosures relating to the impact of the adoption of IFRS 9 and other changes on the Bank as at 1 January 2018.

The table below discloses at the time of the first application of IFRS 9 comparison of categories for the measurement of financial assets and their carrying amounts in accordance with IAS 39 and new categories of measurement of financial assets and their carrying amounts in accordance with IFRS 9.

	IAS 39 MEASUREMENT CATEGORY	IFRS 9 MEASUREMENT CATEGORY	IAS 39 CARRYING AMOUNT	IFRS 9 CARRYING AMOUNT
Cash and due from Central Bank	Loans and advances (Amortised cost)	Amortised cost	5 186 259	5 186 048

(in PLN thousand)

The following explains how the application of the new requirements for the classification of IFRS 9 led to the changes in the classification of certain financial assets held by the Bank as shown in the table above.

Loans and advances to customers

- A) Certain loans and advances to customers (syndicated loans) are measured at fair value through other comprehensive income because they are classified into a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets. Before applying the requirements of IFRS 9, these loans were measured at amortized cost, in accordance with IAS 39.
- B) Some of the loans and advances to customers are classified as measured at fair value through profit or loss, as their contractual cash flows failed to meet the 'solely payments of principal and interest' (SPPI) requirement, due to the leverage that increases the volatility of the contractual cash flows. This applies mainly to student loans, loans with subsidies of the Agency for Restructuring and Modernization of Agriculture and several corporate exposures. Before applying the requirements of IFRS 9, these items were measured at amortized cost, in accordance with IAS 39.
 - The remaining loans and advances to customers held to collect contractual cash flows and meeting the SPPI criteria are still measured at amortized cost.

Corporate and municipal debt securities

- C) The Bank assessed the business model for corporate and municipal securities and identified that part of the portfolio of these securities meets the criteria of the business model, whose objective is achieved by both collecting contractual cash flows and selling financial assets. Therefore, certain securities from this portfolio were classified as measured at fair value through other comprehensive income. Before applying the requirements of IFRS 9, these items were measured at amortized cost, in accordance with IAS 39 and presented as loans and advances to customers.
- D) The remaining part of the portfolio, which is held to collect contractual cash flows, has been reclassified to the item Securities and is measured at amortized cost. Before applying the requirements of IFRS 9, these items were presented as Loans and advances to customers, as they were classified in the loans and receivables category in accordance with IAS 39.

Investments (placement) securities

- E) The Bank assessed the business model for investment securities, which are mostly held to collect cash flows and sell, and identified that in relation to certain of these securities its past practice has been to hold to collect the contractual cash flows and the intention of the Bank remains unchanged. Therefore, the Bank assessed that the appropriate business model for these securities is a model whose objective is to hold to collect contractual cash flows and reclassified them to the amortized cost measurement. Previously, these securities were classified as available for sale and measured at fair value through other comprehensive. As at 30 June 2018, the fair value of securities reclassified from measured at fair value through equity to those measured at amortized cost amounted to PLN 2 242 291 thousand. If these securities had not been reclassified, the Bank would have recognized in other comprehensive income a net profit of PLN 22 481 thousand in the first half of 2018.
- F) The Bank assessed the business model for held-to-maturity securities and, due to the intention to sell certain securities in this portfolio, reclassified securities to be measured at fair value through other comprehensive income, because it assessed that the appropriate business model for these securities is the model whose objective is achieved by both collecting contractual cash flows and selling financial assets. Before applying the requirements of IFRS 9, these items were measured at amortized cost, in accordance with IAS 39. Other securities previously classified as held to maturity were classified as amortized cost.
- **G)** Other securities previously classified as available for sale were classified as at fair value through other comprehensive income, without the change in the measurement method.

Equity instruments

- H) Certain long-term equity instruments in the Bank's portfolio have been irrevocably designated in accordance with IFRS 9 to measure at fair value through other comprehensive income. Prior to the application of IFRS 9, these instruments were measured at fair value through other comprehensive income or at cost, as the Bank stated that it was not possible to reliably measure their fair value. IFRS 9 abolished the possibility of measuring them at cost. Changes in the fair value of such securities will no longer be reclassified to profit or loss when they are disposed of.
- Other equity instruments that, in accordance with IAS 39, were classified as available for sale and were measured at fair value through other comprehensive income, and were not irrevocably designated for measurement at fair value through other comprehensive income, were reclassified to fair value through profit or loss.

(in PLN thousand)

The following table reconciles the prior period's closing impairment allowance measured in accordance with the IAS 39 and provisions for off-balance sheet liabilities calculated in accordance with IAS 37 as at 31 December 2017 to the opening balance of expected credit losses in accordance with IFRS 9 as at 1 January 2018

	IAS 39 MEASUREMENT CATEGORY	IFRS 9 MEASUREMENT CATEGORY	IMPAIRMENT ALLOWANCE IAS 39/IAS 37 31.12.2017	RECLASSIFICATIONS(*)	REMEASUREMENTS	IMPAIRMENT ALLOWANCE IFRS 9 01.01.2018

		IMPAIRMENT ALLOWANCES TOTAL	5 683 628	3 157 363	859 610	9 700 601

^{*)} The item 'Reclassifications' includes changes in the level of impairment allowance that occurred in correspondence with the corresponding change in the gross carrying amount, including: (1) increase in impairment allowances as a result of adjusting the gross carrying amount to IFRS 9 (presentation change resulting in increase in the gross carrying amount by recognition of contractual interest accrued in full against receivables in Stage 3 and, as a consequence, an analogous increase in the level of impairment allowance) and (2) a decrease in impairment allowance for loans and advances classified as POCI, which as at the initial recognition are recognized at fair value and do not show impairment allowance. As a result, the changes described above did not affect the level of the Bank's retained earnings.

(in PLN thousand)

The table below presents the net impact (gross impact less tax effect) of the first application of IFRS 9 and other changes on the equity

	IMPACT OF FIRST	TIME ADOPTION OF IFRS 9 A	T 01.01.2018

Other changes	(277 665)	49 613	(228 052)
Retained earnings at 01.01.2018 under IFRS 9 and other changes	(1 139 911)	203 163	(936 748)
TOTAL IMPACT OF FIRST TIME ADOPTION OF IFRS 9 AND OTHER CHANGES ON EQUITY	(843 363)	146 818	(696 545)

Other changes presented in the table above result from changes made by the Bank in the first half of 2018 in the method of recognizing selected commissions and provisions for holiday leave and recognition of the impact of these changes in the scope relating to previous years as a retained earnings as at 1 January 2018. The comparative data have not been restated due to the insignificant impact of the introduced changes on the Bank's financial results.

Impact of IFRS 9 on capital adequacy

The Bank has decided to apply transitional arrangements specified in art. 473a of Regulation (EU) No 575/2013 of the European Parliament and of the Council of 26 June 2013 on prudential requirements for credit institutions and investment firms and amending Regulation (EU) No 648/2012 as amended Regulation (EU) 2017/2395 of the European Parliament and of the Council of 12 December 2017 amending Regulation (EU) No 575/2013 as regards transitional arrangements for mitigating the impact of the introduction of IFRS 9 on own funds and for the large exposures treatment of certain public sector exposures denominated in the domestic currency of any Member State.

The following table presents the impact of the adoption of IFRS 9 for the first time on capital adequacy with and without transitional arrangements:

	IMPACT OF IFRS 9 WITH TRANSITIONAL ARRANGEMENTS	IMPACT OF IFRS 9 WITHOUT TRANSITIONAL ARRANGEMENTS
Total capital requirement	9 006 840	8 995 466
Total own funds (Tier 1 and Tier 2)	20 947 070	20 096 308
Total Capital Ratio (%)	18.6%	17.9%

(in PLN thousand)

IFRS 15 'Revenue from Contracts with Customers'

IFRS 15 'Revenue from Contracts with Customers' has been approved for application in the European Union by the Regulation of the European Commission No. 2016/1905 of 22 September 2016 and applies to financial statements issued for financial periods beginning on 1 January 2018 or later.

IFRS 15 shall be applied to all contracts with customers, except lease contracts within the scope of IAS 17 'Leases', financial instruments and other contractual rights or obligations within the scope of IFRS 9 Financial Instruments, IFRS 10 'Unconsolidated Financial Statements', IFRS 11 'Joint Arrangements', IAS 27 'Separate Financial Statements' and IAS 28 'Investments in Associates and Joint Ventures', insurance contracts within the scope of IFRS 4 'Insurance Contracts'.

The core principle of this Standard is that the Bank shall recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the Bank expects to be entitled in exchange for those goods or services.

In accordance with IFRS 15, the transfer of goods and services is based on the concept of transferring control to the customer, which may occur at a point in time (delivery of goods, service) or over time (for example during the service or during the creation of the ordered goods).

IFRS 15 defines a five-step revenue recognition model:

Step 1: Identifying the contract with a client

This step consists in making sure that contracts concluded with clients (in writing, orally or in accordance with other customary business practices) are valid and constitute actual transactions. According to IFRS 15, a contract with a client is a contract if it creates enforceable rights and obligations and the following criteria are met:

- the parties to the contract have approved the contract and are committed to perform their respective obligations,
- each party's rights regarding the goods or services to be transferred can be identified,
- the payment terms for the goods or services to be transferred can be identified
- the contract has commercial substance,
- it is probable that the Bank will collect the consideration to which it will be entitled in exchange for the goods or services that will be transferred to the customer. In evaluating whether collectability of an amount of consideration is probable, the Bank shall consider the customer's ability and intention to pay that amount of consideration when it is due.

In some cases the Bank shall combine two or more contracts entered into at or near the same time with the same customer (or related parties of the customer) and account for the contracts as a single contract if one or more of the following criteria are met:

- the contracts are negotiated as a package with a single commercial objective,
- the amount of consideration to be paid in one contract depends on the price or performance of the other contract,
- the goods or services promised in the contracts (or some goods or services promised in each of the contracts) are a single performance obligation.

Step 2: Identifying performance obligations

The performance obligation corresponds to the promised goods or services (or their package), which may be perceived as 'distinct' from other goods or services promised in the contract.

A good or service that is promised to a customer is distinct if both of the following criteria are met:

- the customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (the determinant of this criterion is regular sale by the Bank of goods or services separately),
- the entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract.

(in PLN thousand)

Step 3: Determining the transaction price

The transaction price is the amount of consideration which the Bank expects to receive in exchange for the transfer of goods or services. Determining the transaction price can be complicated if the contract provides for variable consideration (eg bonuses, penalties, refunds, clauses assuming price change, etc.), significant share of financing costs, non-cash consideration or amounts due to the buyer.

Variable consideration is included in the transaction price only when there is a high probability that its inclusion will not result in a 'significant reversal of revenue' in the future as a result of revaluation. A significant reversal of the revenue approach takes place when the subsequent change in the estimated amount of variable consideration results in a significant decrease in the accumulated value of recognized revenues from a given customer. The variable remuneration includes each variable contractual amount, including for example performance bonuses, penalties, discounts, rebates.

Step 4: Allocating the transaction price to distinct performance obligations

If the contract contains more than one distinct performance obligation, the Bank allocates the transaction price to individual obligation based on their stand-alone selling prices.

If the transaction price includes a variable consideration, it should be analyzed whether this amount applies to all or only certain performance obligations contained in the contract. If the criteria included in the standard do not meet the variable consideration as referring only to certain obligations, it should be allocated to all performance obligations included in the contract.

Step 5: Revenue recognition

Revenue is recognised revenue when (or as) the Bank satisfies a performance obligation by transferring a promised good or service (ie an asset) to a customer. An asset is transferred when (or as) the customer obtains control of that asset. Therefore revenues are recognized either at a point in time or over time.

Control of an asset refers to the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset (ie good or service).

The Bank transfers control of a good or service over time and, therefore, satisfies a performance obligation and recognises revenue over time, if one of the following criteria is met:

- the customer simultaneously receives and consumes the benefits provided by the Bank's performance as the Bank
 performs.
- the Bank's performance creates or enhances an asset (for example, work in progress) that the customer controls as the asset is created or enhanced,
- the Bank's performance does not create an asset with an alternative use to the Bank and the Bank has an enforceable right to payment for performance completed to date.

If a performance obligation is not satisfied over time the following indicators of the transfer of control should be considered to determine the point in time at which a customer obtains control of a promised asset:

- The Bank has transferred physical possession of the asset,
- The Bank has a present right to payment for the asset,
- The customer has accepted the asset,
- The customer has the significant risks and rewards of ownership of the asset,
- The customer has legal title to the asset.

The Bank applies IFRS 15 from 1 January 2018. The Bank analyzed the impact of implementing IFRS 15.

(in PLN thousand)

The analysis covered the following types of contracts with clients:

- Agreements with card organizations regarding marketing and promotional activities and related to the development of card activities,
- Lease agreements in which the Bank is the lessor and, in addition to the rental rent, agree with the client (tenant) how
 to settle the maintenance fees for maintenance of the property. In such contracts, the Bank buys and resells,
 for example, municipal services and electricity,
- Contracts for cash transport services for clients.
- 4. Bank accounts contracts, in relation to fees and commissions that are not included in effective interest rate,
- 5. Credit and loan agreements, in relation to fees and commissions that are not included in effective interest rate,
- 6. Agreements regarding the intermediation in the sale of insurance products,
- 7. Agreements regarding the investment funds management.

The Bank did not identify agreements with a variable uncertain consideration components or contracts for which the implementation of IFRS 15 could have a significant impact on the financial statements.

Other standards, interpretations and amendments to published standards that have been approved and published by the European Union and entered into force from or after 1 January 2018.

STANDARD / INTERPRETATION	DESCRIPTION	IMPACT ASSESSMENT
IFRS 2 (amendment) 'Share-based Payment'	The amendments provide requirements on the accounting for: (a) the effects of vesting and non-vesting conditions on the measurement of cash-settled share-based payments, (b) share-based payment transactions with a net settlement feature for withholding tax obligations, and (c) a modification to the terms and conditions of a share-based payment that changes the classification of the transaction from cash-settled to equity-settled.	The standard's amendments did not have a material impact on its financial statements in the period of its first application.
IFRS 4 (amendment) 'Insurance Contracts'	The amendments address concerns arising from implementing the new financial instruments standard, IFRS 9, before implementing the replacement standard that the Board is developing for IFRS 4.	The standard's amendments did not have a material impact on its financial statements in the period of its first application.
IAS 40 (amendment) 'Investment Property'	Amendments to IAS 40 'Investment Property' - Transfers of Investment Property state that an entity shall transfer a property to, or from, investment property when, and only when, there is evidence of a change in use. A change of use occurs if property meets, or ceases to meet, the definition of investment property. A change in management's intentions for the use of a property by itself does not constitute evidence of a change in use. Amendments also state that the list of evidence in paragraph 57 was designated as non-exhaustive list of examples instead of the previous exhaustive list.	The standard's amendments did not have a material impact on its financial statements in the period of its first application.
IFRIC 22 'Foreign Currency Transactions and Advance Consideration'	Interpretation states that the date of the transaction, for the purpose of determining the exchange rate, is the date of initial recognition of the non-monetary prepayment asset or deferred income liability. If there are multiple payments or receipts in advance, a date of transaction is established for each payment or receipt.	The interpretation did not have a material impact on its financial statements in the period of its first application.
Improvements to IFRS 2014-2016	Amendments result from the annual improvement project of IFRS. Amendments relate to IFRS 1, IFRS 12 and IAS 28 and were introduced primarily with a view to removing inconsistencies and clarifying wording.	The standard's amendments did not have a material impact on its financial statements in the period of its first application.

(in PLN thousand)

4.9 New standards, interpretations and amendments to published standards that have been published by the International Accounting Standards Board (IASB) and approved by the European Union but are not yet effective

STANDARD / INTERPRETATION	DESCRIPTION	IMPACT ASSESSMENT
IFRS 9 (amendment) 'Financial Instruments'	Amendments to IFRS 9 - Prepayment Features with Negative Compensation – modify the existing requirements regarding termination rights in order to allow measurement at amortised cost (or, depending on the business model, at fair value through other comprehensive income) even in the case of negative compensation payments. Under the amendments, the sign of the prepayment amount is not relevant, i. e. depending on the interest rate prevailing at the time of termination, a payment may also be made in favour of the contracting party effecting the early repayment. The calculation of this compensation payment must be the same for both the case of an early repayment penalty and the case of an early repayment gain. Date of application: annual periods beginning on or after 1 January 2019.	The Bank claims that the standard's amendments will not have a material impact on its financial statements in the period of its first application.
IFRS 16 'Leases'	Under IFRS 16 a lessee recognises a right-of-use asset and a lease liability. The right-of-use asset is treated similarly to other non-financial assets and depreciated accordingly. The lease liability is initially measured at the present value of the lease payments payable over the lease term, discounted at the rate implicit in the lease if that can be readily determined. If that rate cannot be readily determined, the lessee shall use their incremental borrowing rate. IFRS 16 defines a lease term as the noncancellable period for which the lessee has the right to use an underlying asset including optional periods when an entity is reasonably certain to exercise an option to extend (or not to terminate) a lease. As with IFRS 16's predecessor, IAS 17, lessors classify leases as operating or finance in nature. A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership of an underlying asset. Otherwise a lease is classified as an operating lease. For finance leases a lessor recognises finance income over the lease term, based on a pattern reflecting a constant periodic rate of return on the net investment. A lessor recognises operating lease payments as income on a straight-line basis or, if more representative of the pattern in which benefit from use of the underlying asset is diminished, another systematic basis. Date of application: annual periods beginning on or after 1 January 2019. Earlier application is permitted for entities that apply IFRS 15 Revenue from Contracts with Customers at or before the date of initial application of this Standard.	The Bank did not use the option of early application of IFRS 16 and will apply the standard from 1 January 2019. As part of the implementation of the new standard, the Bank commenced the assessment of contracts to identify whether the contract meets the definition of leasing and estimate of the leasing period. The new requirements eliminate nearly all off balance sheet accounting for lessees. The new standard requires lessees to recognise nearly all leases on the balance sheet which will reflect their right to use an asset for a period of time and the associated liability for payments. This will redefine many commonly used financial metrics. The Bank plans to elect not to apply the new requirements to short-term leases and leases for which the underlying asset is of low value. In relation to the Bank as a lessor - the accounting largely remains unchanged. However the Bank might see an impact to its business model and lease products due to changes in needs and behaviours.

(in PLN thousand)

4.10 New standards, interpretations and amendments to published standards that have been published by the International Accounting Standards Board (IASB) and not yet approved by the European Union

STANDARD / INTERPRETATION	DESCRIPTION	IMPACT ASSESSMENT
IFRS 17 'Insurance Contracts'	The new standard requires insurance liabilities to be measured at a current fulfillment value and provides a more uniform measurement and presentation approach for all insurance contracts. These requirements are designed to achieve the goal of a consistent, principle-based accounting for insurance contracts. IFRS 17 supersedes IFRS 4 'Insurance Contracts' and related interpretations while applied. Date of application: annual periods beginning on or after 1 January 2021.	The Bank claims that the new standard will not have a material impact on its financial statements in the period of its first application.
IAS 19 (amendment) 'Employee Benefits'	Amendments to IAS 19 'Employee Benefits' - Plan Amendment, Curtailment or Settlement - require to use the updated assumptions from this remeasurement to determine current service cost and net interest for the remainder of the reporting period after the change to the plan. Date of application: annual periods beginning on or after 1 January 2019.	The Bank is currently analyzing the impact of those changes on the financial statements.
IAS 28 (amendment) 'Investments in Associates and Joint Ventures'	Amendments to IAS 28 - Long-term Interests in Associates and Joint Ventures - were introduced to clarify that an entity applies IFRS 9 including its impairment requirements, to long-term interests in an associate or joint venture that form part of the net investment in the associate or joint venture but to which the equity method is not applied. Amendments also delete paragraph 41 because the Board felt that it merely reiterated requirements in IFRS 9 and had created confusion about the accounting for long-term interests. Date of application: annual periods beginning on or after 1 January 2019.	The Bank is currently analyzing the impact of those changes on the financial statements.
IFRIC 23 'Uncertainty over Income Tax Treatments'	It may be unclear how tax law applies to a particular transaction or circumstance, or whether a taxation authority will accept a company's tax treatment. IAS 12 Income Taxes specifies how to account for current and deferred tax, but not how to reflect the effects of uncertainty. IFRIC 23 provides requirements that add to the requirements in IAS 12 by specifying how to reflect the effects of uncertainty in accounting for income taxes. Date of application: annual periods beginning on or after 1 January 2019.	The Bank is currently analyzing the impact of those changes on the financial statements.
Improvements to IFRS 2015-2017	Amendments to various standards resulting from the annual improvement project of IFRS (IFRS 3, IFRS 11, IAS 12 and IAS 23) primarily with a view to removing inconsistencies and clarifying wording. The amendments clarify that: a company remeasures its previously held interest in a joint operation when it obtains control of the business (IFRS 3), a company does not remeasure its previously held interest in a joint operation when it obtains joint control of the business (IFRS 11), a company accounts for all income tax consequences of dividend payments in the same way (IAS 12), and a company treats as part of general borrowings any borrowing originally made to develop an asset when the asset is ready for its intended use or sale (IAS 23). Date of application: annual periods beginning on or after 1 January 2019.	The Bank is currently analyzing the impact of those changes on the financial statements.

(in PLN thousand)

5. Accounting estimates

The preparation of interim financial statements in accordance with IFRS requires the Management Board of the Bank to make judgments, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets and liabilities, income and expenses.

The estimates at balance sheet day reflect market conditions on that date (e.g. market prices, interest rates, exchange rates).

Although the estimates are based on the best knowledge concerning current conditions and activities of the Bank, the actual results may differ from those estimates.

During the three months period ended 30 June 2018 the most significant estimates are as follows:

- impairment of financial assets and off-balance sheet commitments,
- fair value measurement for derivative financial instruments and unquoted debt securities.

In connection with the implementation of IFRS 9, the principles of estimating the impairment of financial assets and off-balance sheet liabilities have changed in relation to the principles used in the financial statements for the year ended 31 December 2017. The new rules are described in Note 6.1 'Credit risk'.

The principles of estimating fair value of derivative instruments and unquoted debt securities measured at fair value did not change.

6. Risk management

6.1 Credit risk

The process of credit risk management, credit risk mitigation methods and rating models did not change significantly compared to those described in the unconsolidated financial statements of Bank Pekao S.A. for the year ended on 31 December 2017. The selected quantitative data in these areas are presented below. More extensive information regarding the impairment allowance is presented additionally in connection with the implementation of IFRS9 from the beginning of 2018.

Rating models - comparative data as at 31 December 2017 IAS 39

The Bank has adopted International Financial Reporting Standard 9 'Financial Instruments' with a date of transition of 1 January 2018. The Bank decided to take advantage of the exemption allowing it not to restate comparative information for prior periods with respect to classification and measurement (including impairment) changes. IFRS 9 also significantly amended other standards dealing with financial instruments such as IFRS 7 'Financial instruments: Disclosures'. Disclosures for the comparative period are a repetition of disclosures made in previous periods.

The description of the model for impairment allowance

Since 1 January 2018, the Bank has recognized impairment allowance in accordance with the International Financial Reporting Standard no. 9 Financial Instruments. IFRS 9 assumes the calculation of impairment losses based on expected credit losses and taking into account forecasts and expected future economic conditions in the context of credit risk exposure assessment.

Expected credit loss model

The impairment model applies to financial assets classified, in accordance with the IFRS 9, as financial assets at amortized cost or at fair value through other comprehensive income, with the exception of equity instruments.

The impairment model in accordance with IFRS 9 is based on the allocation of exposure to one of the three stages, depending on credit quality changes compared to the initial recognition of assets in the accounting records. How to calculate the impairment loss depends on the stage:

STAGE	CLASSIFICATION CRITERION TO THE STAGE	THE METHOD OF CALCULATING THE IMPAIRMENT ALLOWANCE
Stage 1	Exposures for which no significant increase in credit risk has been identified since the initial recognition until the balance sheet date and no impairment was identified	12-month expected credit losses
Stage 2	Exposures for which a significant increase in credit risk has been identified since the initial recognition until the balance sheet date and no impairment was identified	Lifetime expected credit losses
Stage 3	Exposures for which impairment has been identified	

In addition, financial assets that were classified as POCI at the time of initial recognition are treated as POCI (i.e. purchased or originated credit-impaired) in all subsequent periods until they are derecognised. This rule applies even if, in the meantime, the asset has been healed. In other words, assets once recognized as POCI remain in this status regardless of future changes in estimates of their cash flows. In the case of instruments with the POCI status, life-time expected credit losses are recognized throughout the lifetime of these instruments.

Calculation of expected credit losses

Calculation of expected credit losses in a lifetime horizon requires the application of multi-annual risk parameters. For the purpose of calculating the credit loss in accordance with IFRS 9, the Bank compares the cash flows that it should receive pursuant to the agreement with the borrower and the flows estimated by the Bank that it expects to receive. The difference is discounted by the original effective interest rate, and in the case of POCI assets – the original effective interest rate adjusted for credit risk.

Expected credit losses are determined in the contractual maturity period with the exception of products meeting the criteria of IFRS 9 para. 5.5.20, for which the Bank determines the expected losses in the period in which it is exposed to credit risk (i.e. in the economic maturity).

Methodology for calculating Bank parameters - PD, RR and EAD.

Multi-annual PD parameters are an assessment of the probability of a default event in the next annual intervals in the lifetime. The PD long-term curve for a given exposure depends on the current value of the 12M PD parameter (and the appropriate rating class) determined based on the internal PD models of the Bank. In the estimation, the Bank:

- a) estimates unbiased PD parameters without taking into account additional margins of conservatism (IFRS 9, paragraph 5.5.17 (a)),
- b) takes into account current and forecasted macroeconomic conditions (IFRS 9, paragraph 5.5.17 (c)).

The calculation of expected recovery rates (RR) is based on the 'pool' model, in which, within homogeneous Banks, average monthly recoveries are calculated conditionally against the month since default (MSD). Homogeneous Banks of accounts were separated on the basis of the following characteristics:

- the type of borrower,
- product type,
- ranges of the LTV parameter (for mortgages and housing loans).

(in PLN thousand)

As part of defined homogeneous Banks, average monthly recovery rates are calculated, which consist of repayments and recoveries resulting from both the secured part and the unsecured exposure, weighted by the value of outstanding capital observed at the beginning of a given MSD.

For products for which a repayment schedule is available, the Bank sets the exposure value at the moment of default (EAD, Exposure at Default) and principal at the moment of default (PAD, Principal at Default) in the lifetime (ie for future repayments) based on contractual payment schedules and taking into account the following effects:

- the effect of arrears on principal and interest installments related to the expected non-payment of the last installments prior to the occurrence of the default,
- the effect of arrears of payments (principal and interest) on the date of calculation of the provision,
- the effect of settlement of the EIR adjustment over time.

For products for which a repayment schedule is not available, the Bank sets the long-term EAD and PAD using the CCF (Credit Conversion Factor) and PADf (PAD factor) parameters. The CCF parameter, which estimates the percentage utilization of the remaining part of the limit in the period of 12 months before the expected moment of the default event, is used to determine the expected value of PAD and EAD parameters in the 12M period from the reference date. The PADf parameter is used to determine the expected value of PAD and EAD parameters from 12M after the reference date to the maturity date of the account.

For exposures for which it is not possible to determine risk parameters based on internal models, the Bank adopts an approach based on using parameters from other portfolios with similar characteristics.

The models and parameters used to calculate impairment allowance are periodically validated.

The low credit risk criterion

According to par. 5.5.10 IFRS 9 exposures that are considered as low risk credit exposures at the reporting date may remain in Stage 1, regardless of the scale of the relative credit deterioration from the initial recognition. According to par. B.5.5.22 of IFRS 9, the credit risk of a financial instrument is considered low when:

- the financial instrument has a low risk of default,
- the borrower has a strong capacity to meet its contractual cash flow obligations in the near term,
- adverse changes in the economic and business conditions in the long term may, but will not necessarily, reduce the ability of the borrower to fulfil its contractual cash flow obligations.

The Bank applies a low credit risk criterion for three portfolios: exposures to banks, exposures to local government units and exposures to the State Treasury and the National Bank of Poland.

Financial assets with an identified significant increase in credit risk

Financial assets for which at the balance sheet date the Bank will identify a significant increase in credit risk from the initial recognition are classified in Stage 2. The Bank recognizes that for a given asset a significant increase in credit risk has been identified if a quantitative or qualitative criterion is met or if contractual payments are more than 30 days past due, where the occurrence of a given criterion is verified at the exposure level.

Quantitative criteria

Taking into account the requirements of the standard, the Bank defined three basic characteristics of the quantitative model:

- the measure on the basis of which the allocation is made to stages,
- the significance of the deterioration of the credit quality,
- quantification of the level of significant deterioration.

The measure, on the basis of which the allocation to stages is made, was set by the Bank as the ratio of:

- current credit risk assessment defined as lifetime PD in the horizon from the reporting date to the maturity date determined on the basis of the characteristics effective as at the reporting date,
- the original credit risk assessment defined as lifetime PD in the period from the reporting date to the maturity date determined on the basis of the characteristics applicable as at the date of initial recognition.

(in PLN thousand)

The assessment of a significant credit risk deterioration is carried out by comparing the observed value of a relative change in the risk assessment with the theoretical value, which is the threshold above which the Bank considers that a significant deterioration in credit risk occurred.

The allocation threshold at the single exposure level is determined by a statistical model based, among others, on information on the credit risk assessment as of the date of the initial recognition and the time from the date of the initial recognition of the exposure.

Quality criteria

As a result of the monitoring process carried out by the Bank, the qualitative criteria for the allocation to Stage 2 are identified, such as:

- a delay in repayment over 30 days (30 DPD),
- occurrence of forbearance status,
- exposure is on the Watchlist.

In addition to the above, the Bank has defined a number of specific quality criteria for various types of portfolios, such as, inter alia, changes in the Bank's internal rating specific to customers in a given segment, changes in supervisory classes for selected segments (eg specialized financing), warning signals identified in the monitoring system and credit risk management or the results of individual monitoring.

Financial assets with identified impairment

Financial assets for which at the balance sheet date the Bank has identified occurrences of the default event are classified in Stage 3. The Bank recognizes that for a given asset a default was identified if at least one of the following occurred:

- amount of arrears above the set materiality threshold for over 90 days,
- exposure during the restructuring process,
- individual impairment trigger.

For SME and corporate segments, default is identified at the customer level, whereas for the retail segment at the customer / product group level. The criterion of days and amounts of delays is also defined at the level of identification. Similarly, if for any of the contracts under the aggregated Bank there is a default condition, all contracts in this Bank are treated as default. The Bank applies a six-month quarantine period effective from the moment all defaults cease to exist.

Taking into account expectations regarding future macroeconomic conditions

IFRS 9 requires the Bank to take into account expectations regarding the macroeconomic situation in the calculation of expected credit losses. As required by IFRS 9, par. 5.5.4, the Bank adjusts risk parameters to take into account forecasted forward-looking macroeconomic information (such as: GDP, unemployment rate, WIBOR, foreign exchange rates, inflation), for portfolios for which it has identified a dependency. The source of information on the values of macroeconomic factors are forecasts prepared by the Bank's analysts.

(in PLN thousand)

The tables below present the changes in impairment allowances and gross carrying amount of financial assets not measured at fair value through profit or loss by class of financial assets:

CHF loans to individuals

Since 2003 Bank Pekao S.A. has not granted CHF loans for individuals. Almost the entire portfolio of CHF loans for individuals was granted before August 2006 by Bank BPH S.A. and then taken over by Bank Pekao S.A. as a result of the merger.

The table below presents the structure and quality of CHF loans for individuals.

As of 30 June 2018 the average LTV for CHF loans to individuals granted by the Bank amounted to 44.6% (45.7% as at 31 December 2017), with an average LTV for the whole portfolio of 62.5% (64.3% as at 31 December 2017).

Offsetting financial assets and financial liabilities

The disclosures in the tables below include financial assets and financial liabilities that are subject to an enforceable master netting agreements or similar agreements, irrespective of whether they are offset in the statement of financial position.

The netting agreements concluded by the Bank are:

- ISDA agreements and similar master netting agreements on derivatives,
- GMRA agreements on repo and reverse-repo transactions.

The netting agreements do not meet the criteria for offsetting in the statement of financial position. This is because they create for the parties to the agreement a right of set-off of recognized amounts that is enforceable only following an event of default, insolvency or bankruptcy of the one of the counterparty. At the balance, day there were no cases of offsetting financial assets and financial liabilities for these netting agreements.

(in PLN thousand)

The Bank receives and gives collateral in the form of cash and marketable securities in respect of the following transactions:

- derivatives.
- repo and reverse-repo transactions.

Such collateral is subject to standard industry terms. The collateral in the form of cash stems from an ISDA Credit Support Annex (CSA).

The securities received/given as collateral on repo and reverse-repo transaction can be pledged or sold during the term of the transaction but have to be returned on maturity of the transaction. The terms also give each party the right to terminate the related transactions on the counterparty's failure to post collateral.

Financial assets and financial liabilities subject to enforceable master netting agreements and similar agreements and which may be potentially offset in the statement of financial position.

6.2 Market risk

Market risk of the trading book

The model of market risk measurement has not changed in relation to the one described in the unconsolidated financial statements of Bank Pekao S.A. for the year ended 31 December 2017.

The table below presents the market risk exposure of the trading portfolio of the Bank measured by Value at Risk in the period from 1 January to 30 June 2018 and in 2017:

	30.06.2018	MINIMUM VALUE	AVERAGE VALUE	MAXIMUM VALUE
foreign currency exchange risk	33	9	164	1 232
interest rate risk	815	472	1 033	1 722
Trading portfolio	792	488	1 068	2 384

	31.12.2017	MINIMUM VALUE	AVERAGE VALUE	MAXIMUM VALUE
foreign currency exchange risk	739	13	364	1 918
interest rate risk	791	496	1 013	1 925
Trading portfolio	1 058	533	1 150	3 030

Interest rate risk of the banking book

The banking book interest rate risk management process has not changed significantly in relation to the one described in the unconsolidated financial statements of Bank Pekao S.A. for the year ended on 31 December 2017. Selected amendments have been introduced. The risk profile of own funds and additional interest rate risk scenarios considering tilts and changes in the shape of the yield curve have been accounted for in the EVE measures applied for the ongoing internal management. The aggregation rules have also been altered assuming no or partial compensation of the results for specific currencies.

The following table presents contractual NII sensitivity to the change of interest rates by 100 basis points and the EVE sensitivity to the change of interest rates by 200 basis points (standard scenario not accounting for risk profile of own funds) as at 30 June 2018 and as at 31 December 2017.

SENSITIVITY IN %	30.06.2018	31.12.2017
NII	(8.61)	(8.04)
EVE	(4.38)	0.65

Currency risk

The foreign currency exchange risk management process has not changed significantly in relation to the one described in the unconsolidated financial statements of Bank Pekao S.A. for the year ended 31 December 2017.

The tables below present the Bank's foreign currency risk profile measured by Value at Risk and currency position.

^(*) Exposure amounts from balance liabilities, financing-related off-balance sheet commitments granted and guarantee liabilities granted have been allocated to earliest tenors, for which an outflow of assets from the Bank is possible based on contracts entered into by the Bank. However, outflows expected by the Bank are actually significantly lower than those indicated by the specification presented above. The above is a consequence of considerable diversification of amounts due to customers and stages of life of individual contracts. Risk monitoring and management in relation to the outflow of assets are provided by the Bank on continuous basis. The Bank estimates also more probable flows that are reflected in Tables 'Adjusted liquidity gap'.

^(**) Including Central Bank.

(in PLN thousand)

The financial cash flows associated with off-balance sheet derivative transactions

The following are the liabilities and financial cash flows associated with off-balance sheet derivative transactions, settled, respectively in net and gross amounts.

Off-balance sheet derivative transactions settled by the Bank in net amounts include:

- Interest Rate Swaps (IRS),
- Forward Rate Agreements (FRA),
- Foreign currency options and options for gold,
- Interest rate options (Cap/Floor),
- Transactions based on equity securities and stock indexes,
- Transactions based on commodities and precious metals.

Off-balance sheet derivative transactions settled by the Bank in gross amounts include:

- Cross-Currency Interest Rate Swaps (CIRS),
- Foreign currency forward contracts,
- Foreign currency swaps (FX-Swap),
- Forward contracts based on securities.

6.4 Operational risk

There have been no significant changes in the operational risk management process in relation to the one described in unconsolidated financial statements of Bank Pekao S.A. for the year ended 31 December 2017.

6.5 Fair value of financial assets and liabilities

Financial instruments that are measured at fair value in the unconsolidated statement of financial position of the Bank

The measurement of fair value of financial instruments, for which market values from active markets are available, is based on market quotations of a given instrument (mark-to-market).

The measurement of fair value of Over-the-counter ('OTC') derivatives and instruments with limited liquidity (i.e. for which no market quotations are available), is made on the basis of other instruments quotations on active markets by replication thereof using a number of valuation techniques, including the estimation of present value of future cash flows (mark-to-model).

As of 30 June 2018 and 31 December 2017, the Bank classified the financial assets and liabilities measured at fair value into the following hierarchy of three categories based on the following hierarchy:

- Level 1: mark-to-market, applies to securities quoted on active markets,
- Level 2: mark-to-model valuation with model parameterization, based on quotations from active markets for given type
 of instrument, applies to illiquid government, municipal, corporate and central bank debt securities, linear and non-linear
 derivative instruments of interest rate markets (including forward transactions on debt securities), equity, commodity and
 foreign currency exchange markets, except for those cases that meet the criteria of Level 3,
- Level 3: mark-to-model valuation with partial model parameterization, based on estimated risk factors, applicable to
 loans and advances, corporate and municipal debt securities and for linear and non-linear derivative instruments of
 interest rate, equity, commodity and foreign currency exchange markets for which unobservable parameters (e.g. credit
 risk factors) are recognized as significant.

The measurement at fair value is performed directly by an organizational unit within Risk Management Division, independent of front-office units. The methodology of fair value measurement, including the changes of its parameterization, is subject to approval of Assets and Liabilities Committee (ALCO). The adequacy of measurement methods is subject to on-going analysis and periodical reviews in the framework of model risk management. The same Risk Management Division unit performs the assessment of adequacy and significance of risk factors and assignment of valuation models to appropriate method class, according to established hierarchy of classification.

Transfers of instruments between fair value hierarchy levels are based on changes in availability of active market quotations as at the end of the reporting periods.

In the period from 1 January to 30 June 2018 the following transfers of financial instruments between the levels of the fair value hierarchy were made:

- from level 2 to level 1: a government bond denominated in PLN for which guotes were available on the active market,
- from Level 3 to Level 2: municipal bonds which were valued based on information on the prices of comparable financial instruments and capital market derivative instruments for which impact of the unobservable factor (correlation) on the valuation was immaterial,
- from level 2 to level 3: municipal and corporate bonds, for which impact of estimated credit parameters was material and capital market derivative instruments with material impact of the estimated factor (correlation) on the valuation.

(in PLN thousand)

The impact of estimated parameters on measurement of financial instruments for which the Bank applies fair value valuation according to Level 3 as at 30 June 2018 and as at 31 December 2017 is as follows:

FINANCIAL ASSET/LIABILITY	FAIR VALUE	VALUATION	UNOBSERVABLE	ALTERNATIVE FACTOR RANGE	IMPACT ON FAIR VALUE AS AT 30.06.2018	
	AS AT 30.06.2018	TECHNIQUE	FACTOR	(WEIGHTED AVERAGE)	POSITIVE SCENARIO	NEGATIVE SCENARIO
Corporate and municipal debt securities	4 741 972	Discounted cash flow	Credit spread	0.67% - 1.18%	51 192	(51 192)
Government debt securities	17 980	Discounted cash flow	Benchmark bond spread	0.04% - 0.36%	389	(389)
Derivatives	1 639	Black Scholes Model	Correlation	0 - 1	674	(653)
Loans and advances measured at fair value through profit or loss	335 242	Discounted cash flow	Credit spread	0.64% - 1.07%	1 984	(1 964)
Loans and advances measured at fair value through other comprehensive income	1 388 536	Discounted cash flow	Credit spread	2.01% - 2.42%	3 326	(3 077)

FINANCIAL ASSET/LIABILITY	FAIR VALUE AS AT	VALUATION	UNOBSERVABLE	ALTERNATIVE FACTOR RANGE	IMPACT ON FAIR VALUE AS AT 31.12.2017	
FINANCIAL ASSET/LIABILITY	31.12.2017	TECHNIQUE	FACTOR	(WEIGHTED AVERAGE)	POSITIVE SCENARIO	NEGATIVE SCENARIO
Municipal debt securities	652 597	Discounted cash flow	Credit spread	0.45% - 0.87%	3 856	(3 856)
Government debt securities	14 211	Discounted cash flow	Benchmark bond spread	0.09% - 0.46%	448	(448)
Derivatives	1 218	Black Scholes Model	Correlation	0 - 1	966	(578)

Financial instruments that are not measured at fair value in the statement of financial position of the Bank

The Bank also holds financial instruments which are not presented at fair value in the financial statements. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

As of 30 June 2018 and 31 December 2017, the Bank classified the financial assets and liabilities not measured at fair value in the unconsolidated statement of financial position into the following three categories based on the valuation level:

- Level 1: mark-to-market, applies to government securities quoted on the liquid market and cash,
- Level 2: mark-to-model valuation with model parameterization, based on quotations from active markets for given type of instrument, applies to interbank deposits, own issues, illiquid government, municipal, corporate and central bank debt securities,
- Level 3: mark-to-model valuation with partial model parameterization, based on estimated risk factors, is applicable to
 corporate and municipal debt securities and loans and deposits for which the applied credit risk factor (an unobservable
 parameter) is recognized significant.

(in PLN thousand)

In case of certain Banks of financial assets, recognized at the amount to be received with impairment considered, the fair value was assumed to be equal to carrying amount. The above applies in particular to cash and other financial assets and liabilities.

In the case of loans for which no quoted market values are available, the fair values presented are generally estimated using valuation techniques taking into consideration the assumption, that at the moment when the loan is granted its fair value is equal to its carrying amount. Fair value of non-impaired loans is equal to the sum of future expected cash flows, discounted at the balance sheet date, less expected credit loss. The discount rate is defined as the appropriate market risk-free rate plus the liquidity risk margin and current sales margin for the given loan products Bank. The margin is computed on loans granted broken down by loan product Banks and maturity.

For the purpose of the fair value of foreign currency loans estimation, the margin on PLN loans adjusted by the cross-currency basis swap quotes and FX-Swap is used. The fair value of impaired loans is defined as equal to the sum of expected recoveries, discounted with the use of effective interest rate, since the average expected recovery values take the element of credit risk fully into consideration. In case of loans without repayment schedule (loans in current account, overdrafts and credit cards), the fair value was assumed as equal to the carrying amount.

Since no quoted market prices are available for deposits, their fair values have been generally estimated using valuation techniques with the assumption that the fair value of a deposit at the moment of its receipt is equal to its carrying amount. The fair value of term deposits is equal to the sum of future expected cash flows, discounted at the relevant balance sheet date. The cash flow discount rate is defined as the relevant market risk-free rate, increased by the sales margin. The margin is computed on deposits acquired during last three months broken down by deposit product Banks and maturity. In case of short term deposits (current deposits, overnights, saving accounts), the fair value was assumed as equal to the carrying amount.

The fair value of deposits and loans, apart from cash and mortgage loans denominated in PLN and CHF for which prepayment model is used, is calculated based on contractual cash flows.

The mark-to-model valuation of own issue debt instruments is based on the method of discounting the future cash flows. Variable cash flows are estimated based upon rates adopted for specific markets (depending upon issue specifications). Both the fixed and implied cash flows are discounted using interbank money market rates.

From 1 January 2017 new rules for making contributions to Bank Guarantee Fund (hereinafter 'BGF'), defined in the Act of 10 June 2016 on Bank Guarantee Fund, deposit guarantee schemes and resolution of banks (hereinafter 'BGF Act'), have to be applied.

In accordance with BGF Act, the banks are committed to make quarterly contributions to deposit guarantee fund of banks and annual contribution to resolution fund of banks. Such contributions are expenses not deductible for tax purposes. The obligation to make quarterly contribution to deposit guarantee fund of banks arises at the first day of each quarter, whereas the obligation to make annual contribution to resolution fund of banks arises at 1 January of the year concerned.

As a result of application of the Interpretation IFRIC 21 *Levies* for recognition of the above obligations, the costs of halfly contribution to deposit guarantee fund of banks in the amount of PLN 60 689 thousand (PLN 44 327 thousand in the first half of 2017) and the costs of annual contribution to resolution fund of banks in the amount of PLN 143 242 thousand (PLN 176 897 thousand in 2017) are charged to the income statement for the first half of 2018.

Diluted earnings per share (in PLN per share)	2.47	4.13	1.99	3.73

21. Dividend payment

The dividends and other payments to shareholders are recognized directly in equity. The dividend payable is not recognized until the entity has no obligation to pay dividends that is until the payment is approved by the General Meeting.

On 21 June 2018 the Ordinary General Meeting of Bank Pekao S.A. made the resolution regarding the dividend payment for year 2017. The dividend to the shareholders contributed an amount of PLN 2 073 513 268.60, wherein the amount of the dividend per one share was PLN 7.90. The dividend's day was fixed for 6 July 2018.

The payment of the dividend was on 20 July 2018.

Carrying amount	115 920 736	1 388 536	335 242	117 644 514	128 873 178

^(*) The impairment allowance for loans and advances to customers measured at fair value through equity in the amount of PLN 15 671 thousand is included in the 'Revaluation reserve' item and does not reduce the carrying amount of the loan.

Corporate and municipal debt securities were transferred to the 'Investment (placement) securities' item. Before applying the requirements of IFRS 9, these items were presented as loans and advances to customers, as they were classified in the Loans and receivables category in accordance with IAS 39.

Due to the classification of some loans and advances to customers (ie loans in the part intended for syndication) to the business model, whose objective is achieved by both collecting contractual cash flows and selling financial assets, these loans are measured at fair value through other comprehensive income.

The Bank identified a portfolio of loans that do not meet the SPPI criterion due to the leverage element in contracts increasing the volatility of cash flows, which includes student loans, loans with subsidies of the Agency for Restructuring and Modernization of Agriculture and several corporate exposures. Therefore, despite the business model, whose objective is to hold financial assets in order to collect contractual cash flows, for these loan portfolios there is a need to measure at fair value through the profit and loss account.

According to IFRS 9 at the moment of recognizing the impairment, the interest recognized in the income statement is calculated based on the amount reduced by an allowance for expected credit losses (net carrying amount), whereas in the balance sheet accrued interest is calculated on the gross amount of the exposure. The difference is included in the impairment allowance. The increase in the amount of impairment allowance, besides the increase resulting from the expected credit losses approach reflected in the Bank's retained earnings, includes also changes reflecting the new approach to interest recognition.

27. Hedge accounting

The Bank decided to take advantage of the choice given by IFRS 9 and continues to apply hedge accounting procedures according to IAS 39. This decision concerns all hedging relationships, for which the Bank applies and will apply hedge accounting in the future.

As of 30 June 2018 the Bank applies fair value hedge accounting and cash flow hedge accounting.

Fair value hedge accounting

The Bank applies fair value hedge accounting for fixed coupon debt securities denominated in PLN, EUR and USD, hedged with interest rate swap (IRS) transactions in the same currencies. The Bank hedges component of interest rate risk related to the fair value changes of the hedged item resulting exclusively from the volatility of market interest rates (WIBOR, EURIBOR, LIBOR USD). The IRS transactions receive floating-rate flows, and pay fixed-rate flows. In the past, hedged risk component accounted for a significant portion of changes in fair value of the hedged item.

The approach of the Bank to market risk management, including interest rate risk, is presented in Note 6.2. Details regarding exposure of the Bank to interest rate risk is disclosed in Note 6.2.

The use of derivative instruments to hedge the exposure to changes in interest rates generates counterparty credit risk of derivative transactions. The Bank mitigates this risk by requiring the counterparties to post collateral deposits and by settling derivative transactions through Central Counterparty Clearing Houses (CCPs) which apply a number of mechanisms allowing systemic reduction of the risk of default on obligations under concluded transactions.

The Bank applies fair value hedge accounting to a hedging relationship if it is justified to expect that the hedge will be highly effective in achieving offsetting fair value changes attributable to the hedged risk in the future and if assessment of hedge effectiveness indicates high effectiveness in all financial reporting periods for which the hedge was designated.

According to the approach of the Bank, hedge ratio is determined as ratio of fair value of the hedged item to fair value of the hedging instrument. A hedging relationship is considered effective if all of the following criteria are met:

- high effectiveness of the hedge can be expected on the basis of comparison of critical terms of the hedged item and the hedging instrument.
- in each reporting period, hedge ratio is within 80% 125% range or relation of inefficiency amount to nominal value
 of the hedged item is less or equal than the threshold specified in documentation of the hedging relationship, where
 inefficiency amount is calculated as the sum of cumulative fair value changes of the hedged item and the hedging
 instrument,
- in each reporting period, simulation of hedge ratio in assumed evoluation of market reference rates scenarios is within 80% 125% range.

As regards fair value hedge relationships, the main sources of ineffectiveness are:

- impact of the counterparty credit risk and own credit risk of the Bank on the fair value of the hedging transactions (IRS), which is not reflected in the fair value of the hedged item,
- differences in maturities of the interest rate swaps and debt securities,
- differences in coupon amounts generated by the hedged item and hedging instruments.

The tables below present interest rate swaps which are used by the Bank as instruments hedging interest rate risk in fair value hedge accounting as of 30 June 2018 and 31 December 2017.

Cash flow hedge accounting

The Bank applies:

- cross-currency interest rate swaps (CIRS) to hedge exposure to interest rate risk related to volatility of market reference
 rates (WIBOR, LIBOR CHF) and exposure to currency risk. Portfolios of variable-rate loans denominated in CHF and
 deposits in PLN (which economically reflects to long-term variable-rate liability) are hedged items in this hedging
 relationship. CIRS transactions are decomposed into the part hedging the portfolio of assets and the part hedging the
 portfolio of liabilities,
- interest rate swaps (IRS) to hedge the exposure to interest rate risk related to the volatility of market reference rates (WIBOR), generated by portfolios of variable-rate loans denominated in PLN,
- currency swap (FX-Swap) to hedge the exposure to interest rate risk related to the volatility of market reference rates (EURIBOR, LIBOR USD), and the exposure to the currency risk, generated by portfolios of variable-rate of loans denominated in EUR and USD,
- interest rate swaps (IRS) to hedge the exposure to interest rate risk related to the volatility of market reference rates (WIBOR, EURIBOR), generated by portfolio of deposits denominated in PLN and EUR, which economically reflect a long-term, variable-rate liability.

Approach of the Bank to hedging interest rate risk through cash flow hedge accounting is the same as the approach applied in the fair value hedge accounting as described above, i.e. only the component of interest rate risk related exclusively to volatility of market reference rates (in the case of cash flows hedge: WIBOR, EURIBOR, LIBOR USD, LIBOR CHF) is hedged. Approach of the Bank to market risk management, including interest rate risk and currency risk, is presented in Note 6.2. Details regarding the Bank's interest rate risk and currency risk exposure are disclosed in Note 6.2.

As in the case of the fair value hedge, using derivative instruments to hedge the exposure to interest rate risk and currency risk generates counterparty credit risk of the derivative transactions, which is not compensated by the hedged item. The Bank manages this risk in a way similar to fair value hedge.

The Bank applies cash flow hedge accounting to a hedging relationship if it is justified to expect that the hedge will be highly effective in achieving offsetting cash flow changes attributable to the hedged risk in the future and if assessment of hedge effectiveness indicates high effectiveness in all financial reporting periods for which the hedge was designated. The assessment is conducted using hypothetical derivative method.

According to the approach of the Bank, a hedging relationship is considered effective if all of the following criteria are met:

- correlation coefficient between market reference rate of hedged items and market reference rate of hedging instrument is high.
- forecasted interest flows generated by hedged items are not lower than forecasted interest flows generated by hedging instruments,
- in each reporting period, ratio of the fair value of the hedged item to the fair value of the hedging instrument is within 80% 125% range or relation of inefficiency amount to nominal value of the hedged item is less or equal to the threshold specified in documentation of the hedging relationship, where inefficiency amount is calculated as the sum of cumulative fair value changes of the hedged item and the hedging instrument,
- In each reporting period, ratio of fair value changes of the hedged item to the hedging instrument due to parallel fall or rise in yield curves by 100 basis point is within 80% 125% range.

In the case of hedging interest rate and currency risk of portfolios of loans and deposits, the manner of managing these portfolios was adopted allowing for regular inclusion of new transactions in the hedging relationship and exclusion of transactions from the hedging relationship as a result of repayment or classification to non-performing category. As a result, the exposure of these portfolios to interest rate and currency risk is constantly changing. Because of frequent changes to term structure of the portfolio, the Bank dynamically assigns the hedged items and allows for matching of hedging instruments to these changes.

As regards cash flow hedge relationships, the main sources of ineffectiveness are:

- impact of counterparty and the Bank's own credit risk on the fair value of the hedging instruments, i.e. interest rate swap (IRS), cross-currency interest rate swap (CIRS), currency swap (FX swap) which is not reflected in the fair value of the hedged item;
- differences in repricing frequency of the hedging instruments and and hedged loans and deposits.

Provisions for litigation and claims

Provisions for litigation and claims include court, administrative and other legal proceedings. The provisions were estimated in the amount of expected outflow of resources embodying economic benefits.

Provisions for defined benefits plans

Provisions for defined benefits plans consist of provisions for retirement benefits and death-in-service benefits. The present value of such obligations is measured by an independent actuary using the projected unit credit method.

Other provisions

Other provisions include in particular provisions for other employee benefits.

(in PLN thousand)

38. Contingent commitments

Court litigations

As at 30 June 2018 the Bank is involved in the following, major in terms of the litigation value, court proceedings:

1) to be paid (brought against the Bank):

- brought by the joint stock company's receiver in liquidation bankruptcy claim for the payment of damages for the damage incurred as a result of Bank demanding immediate repayment of the balance resulting from the necessity to pay the price set under the debt balance assignment agreement and instigation of the debt enforcement proceedings concerning the remaining part of this price; the value of the litigation is 57 450 130 PLN; date the proceedings were instigated 30 April 2015; in the light of the present legal status of the proceedings, Bank evaluates the risk of the loss of funds as minor,
- brought by a guarantee beneficiary claim for the payment of the guarantee issued by the Bank; the value of the litigation is 55 996 064.23 PLN; date the proceedings were instigated 20 May 2014, in the light of the present legal status of the proceedings, Bank evaluates the risk of the loss of funds as possible,
- brought by a guarantee beneficiary claim for the payment of the guarantee issued by the Bank; the value of the litigation is 43 760 219 PLN; date the proceedings were instigated 29 January 2013; in the light of the present legal status of the proceedings, Bank evaluates the risk of the loss of funds as probable. On 27 June 2018 the Appellate Court in Warsaw announced the decision to dismiss the Bank's appeal in which the Bank had questioned in its entirety the decision of the Circuit Court in Warsaw of 23 May 2016 ordering the Bank to pay the amount of 43 760 219 PLN. As the decision of the Appellate Court is legally binding and following the plaintiff's call, Bank made the payment of the claimed amount using the provision that had already been set aside. Bank addressed the Appellate Court with a request to be delivered the decision with the justification in order to consider the purposefulness of filing a cassation appeal,
- brought be an individual claim for the payment by the Bank of the amount collected as a result of settlement
 of the forward financial transactions; the value of the litigation is 38 916 555.18 PLN; date the proceedings were
 instigated 02 October 2016; in the light of the present legal status of the proceedings, Bank evaluates the risk
 of the loss of funds as possible,
- brought by a guarantee beneficiary claim for the payment of the guarantee issued by the Bank; the value of the litigation is 32 750 000 PLN; date the proceedings were instigated 14 January 2014; in the light of the present legal status of the proceedings, Bank evaluates the risk of the loss of funds as minor,
- brought by a guarantee beneficiary claim for the payment of the guarantee issued by the Bank; the value of the litigation is 29 204 684 PLN; date the proceedings were instigated 16 January 2015; in the light of the present legal status of the proceedings, Bank evaluates the risk of the loss of funds as possible,

2) to be received (brought by Bank):

- Bank's counterclaim for determination of the expiry of the bank guarantee and payment of the balance due from the debt assignment; value of the litigation is 133 738 104.92 PLN; date the proceedings were instigated – 28 February 2013,
- brought by the Bank against the limited debtor (in possession) for the payment of the mortgage securing loan repayment; value of the litigation is 132 877 901 PLN; date the proceedings were instigated 21 January 2016,
- brought by the Bank for the payment of the loan balance and determination of existence of the balance due to the Bank; value of the litigation is 111 165 487 PLN; date the proceedings were instigated 29 January 2013,

None of the litigations pending before courts, authorities competent for arbitration proceedings or public administration authorities in the first half of year 2018 created any threat to the Bank's financial liquidity.

As at 30 June 2018, the Bank created provisions for litigations against the Bank which, according to the legal opinion, are connected with a risk of the funds outflow resulting from the fulfillment of the obligation. The value of the above provisions as at 30 June 2018 is PLN 46 061 thousand (PLN 15 204 thousand as at 31 December 2017).

40. Related party transactions

The transactions between the Bank and related parties are typical transactions arising from current operating activities conducted by the Bank. Such transactions mainly include loans, deposits, foreign currency transactions and guarantees.

The credit granting process applicable to the Bank's management and entities related to the Bank

According to the Banking Act, credit transactions with Members of the Bank's Management Board and Supervisory Board, persons holding managerial positions at the Bank, with the entities related financially or organizationally therewith, shall be effected according to Regulation adopted by the Supervisory Board of the Bank.

The Regulation provides detailed decision-making procedures, applicable to transactions with such persons and entities, also defining the decision-making levels authorized to take decisions. In particular, the transactions with the Members of the Bank's Management Board or Supervisory Board or with an entity related therewith financially or organizationally, are subject to decisions taken by the Bank's Management Board and Supervisory Board.

Members of the Bank's Management Board and entities related therewith financially or organizationally may take advantage of credit products offered by the Bank on standard terms and conditions of the Bank. In particular, the Bank may not offer more advantageous credit interest rates to such persons or entities.

Credit risk assessment is performed using the methodology applied by the Bank, tailored to the client's segment and type of transaction.

In case of entities related to the Bank, the standard credit procedures are applied, with transaction-related decisions taken exclusively at level of the Bank's Head Office.

Supervisory Board of the Bank			
Short-term employee benefits (*)	788	445	
Total	788	445	

^(*) Short-term employee benefits include: base salary, bonuses and other benefits due in next 12 months from the date of the balance sheet.

The Bank's Management Board and Supervisory Board Members did not receive any remuneration from subsidiaries and associates in the period from 1 January to 30 June 2018 and in the period from 1 January to 30 June 2017.

41. Subsequent events

Court litigation after the balance sheet day

On 19 July 2018 the Bank was delivered a statement of claim brought by a legal person for the payment of 17 521 646 EUR (which at the average NBP rate of 19 July 2018 translated to PLN 75 610 347.81) resulting from an improper performance of the agreement. The Bank is in the process of preparing the answer to the claim and estimating the probability of funds outflow risk.

^(**) The item 'Other long-term benefit' includes: provisions for deferred bonus payments.

^(***) The value of share-based payments is a part of Personnel Expenses, recognized according to IFRS 2 during the reporting period in the income statement, representing the settlement of fair value of share options and shares, including phantom shares, granted to the Members of the Bank's Management Board.

Glossary

Glossary

IFRS – International Financial Reporting Standards – the standards, interpretations and their structure adopted by the International Accounting Standards Board (IASB.)

IAS - International Accounting Standards - previous name of the standards forming part of the current IFRS.

IFRIC – International Financial Reporting Interpretations Committee – the committee operating under the International Accounting Standards Board publishing interpretations of IFRS.

CIRS – Currency Interest Rate Swap – the transaction exchange of principal amounts and interest payments in different currencies between two counterparties.

IRS – Interest Rate Swap – the agreement between two counterparties, under which the counterparties pay each other (at specified intervals during the contract life) interest on contractual principal of the contract, charged at a different interest rate.

FRA – Forward Rate Agreement – the contract under which two counterparties fix the interest rate that will apply in the future for a specified amount expressed in currency of the transaction for a predetermined period.

CAP – the financial agreement, which limits the risk borne by lender on a variable interest rate, exposed to the potential loss as a result of increase in interest rates. Cap option is a series of call options on interest rates, in which the issuer guarantees the buyer the compensation of the additional interest costs, that the buyer must pay if the interest rate on loan increases above the fixed interest rate.

FLOOR –the financial agreement, which limits the risk of incurring losses resulting from decrease in interest rates by the lender providing the loan at a variable interest rate. Floor option is a series of put options on interest rates, in which the issuer guarantees the interest to be paid on the loan if the interest rate on the loan decreases below the fixed interest rate.

IBNR - Incurred but Not Reported losses.

PD – Probability Default – the parameter used in Internal Ratings-Based Approach which determines the likelihood that the debtor will be unable to meet its obligation. PD is a financial term describing the likelihood of a default over an one year time horizon.

LGD - Loss Given Default - the percentage of loss over the total exposure when bank's counterparty goes to default.

EAD – Exposure at Default.

EL - Expected Loss.

CCF – Credit Conversion Factor.

VaR – Value at Risk – the risk measure by which the market value of an asset or portfolio may be reduced for a given assumptions, probability and time horizon.

ICAAP - Internal Capital Adequacy Assessment Process - the process of assessing internal capital adequacy.
